

# Visualize data with ggplot2

# Cars and displacement

**What is the relationship between a car's engine weight (displacement) and its mileage (miles per gallon)?**

# Your turn #1

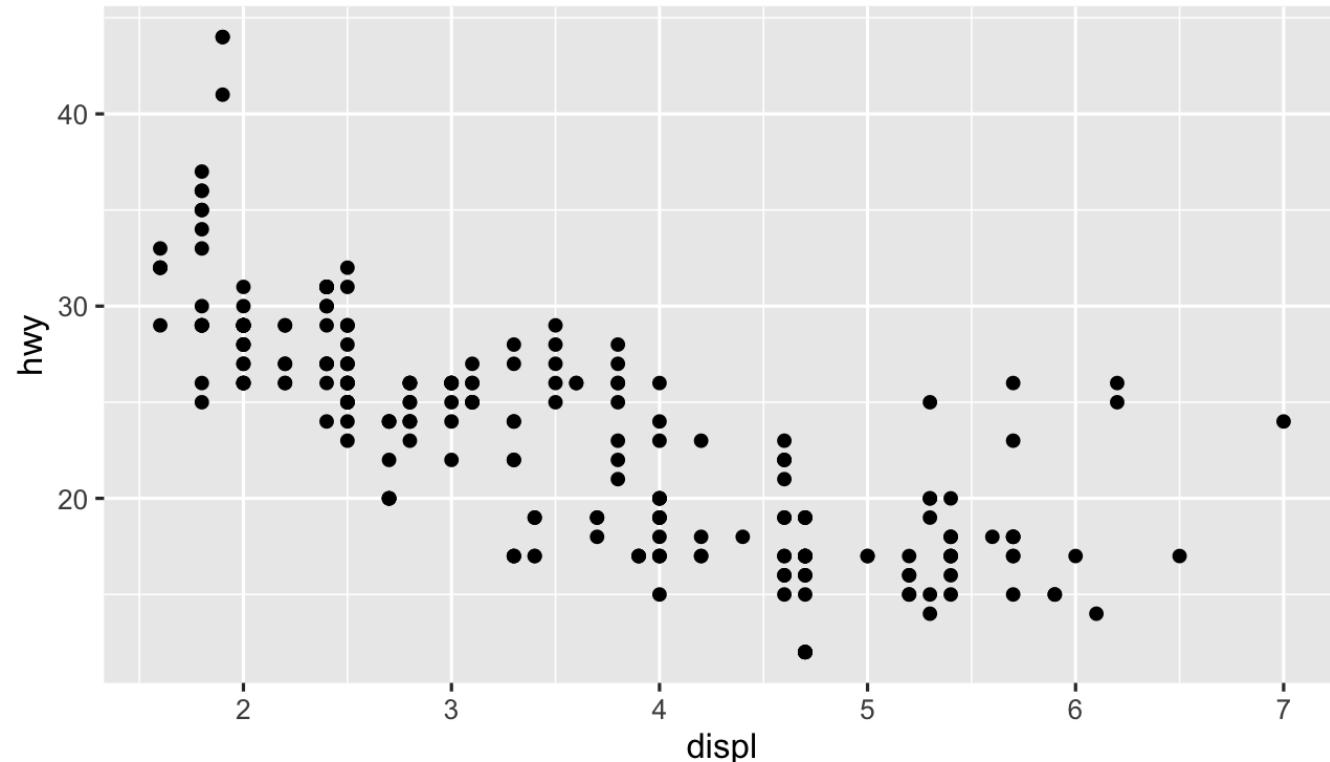

Run this code in your Quarto file to make a graph

Pay attention to spelling, capitalization, and parentheses!

```
ggplot(data = mpg) +  
  geom_point(mapping = aes(x = displ, y = hwy))
```

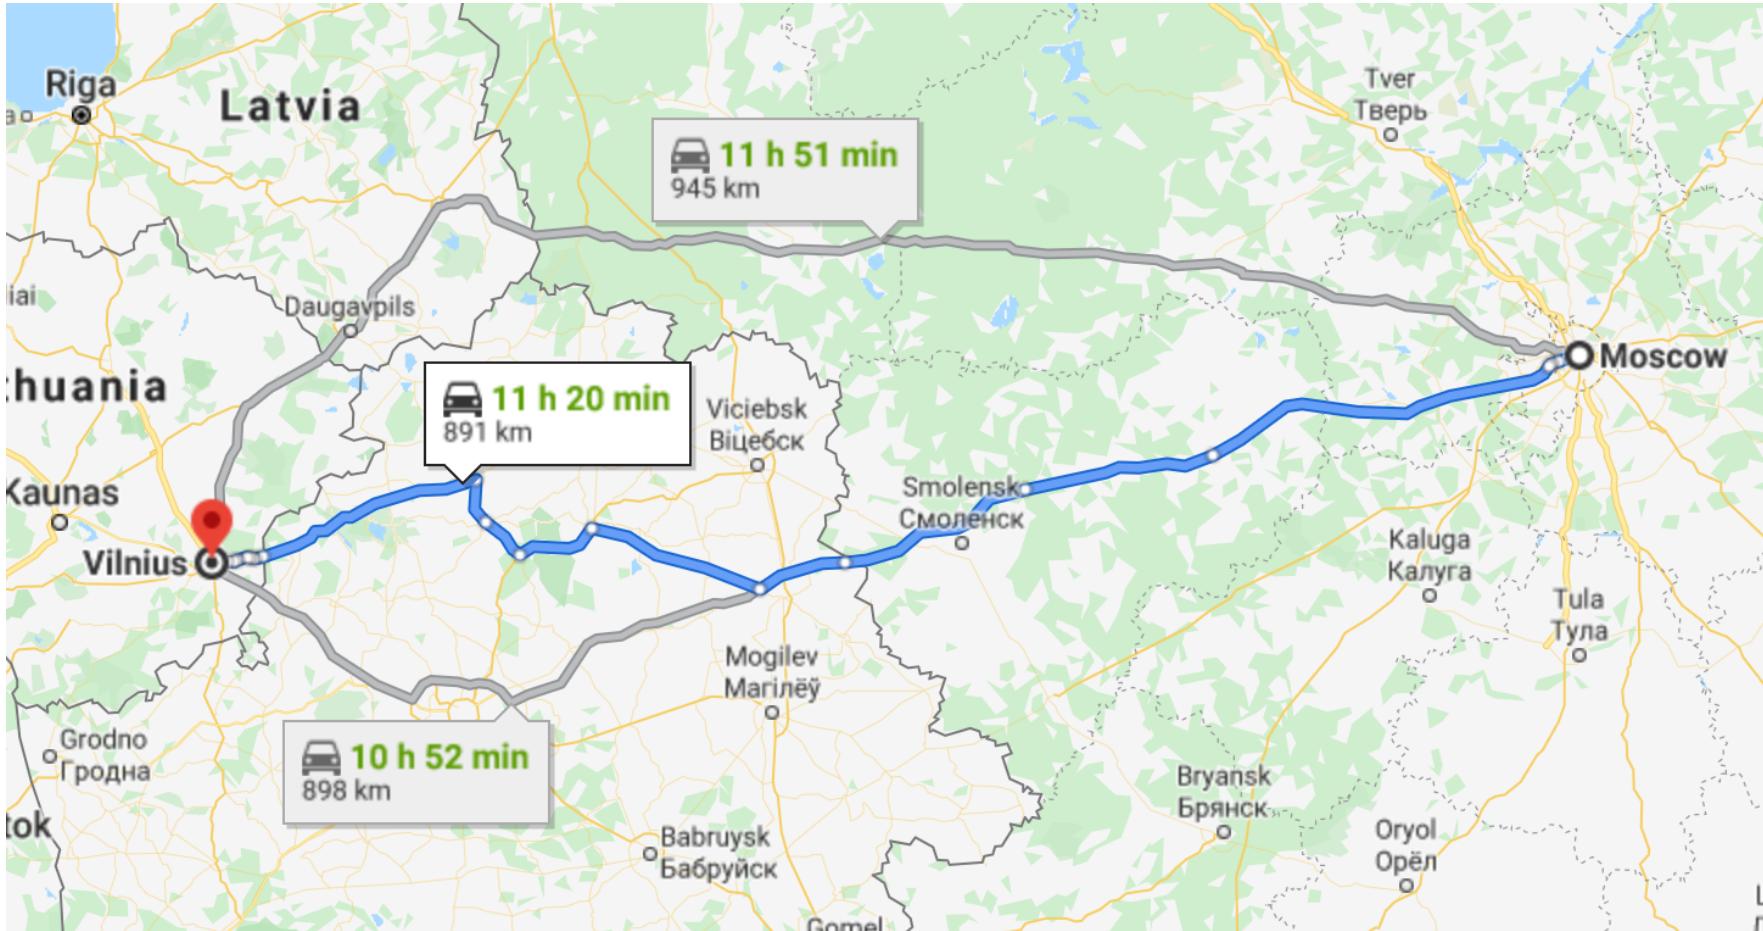

01:00

```
ggplot(data = mpg) +  
  geom_point(mapping = aes(x = displ, y = hwy))
```

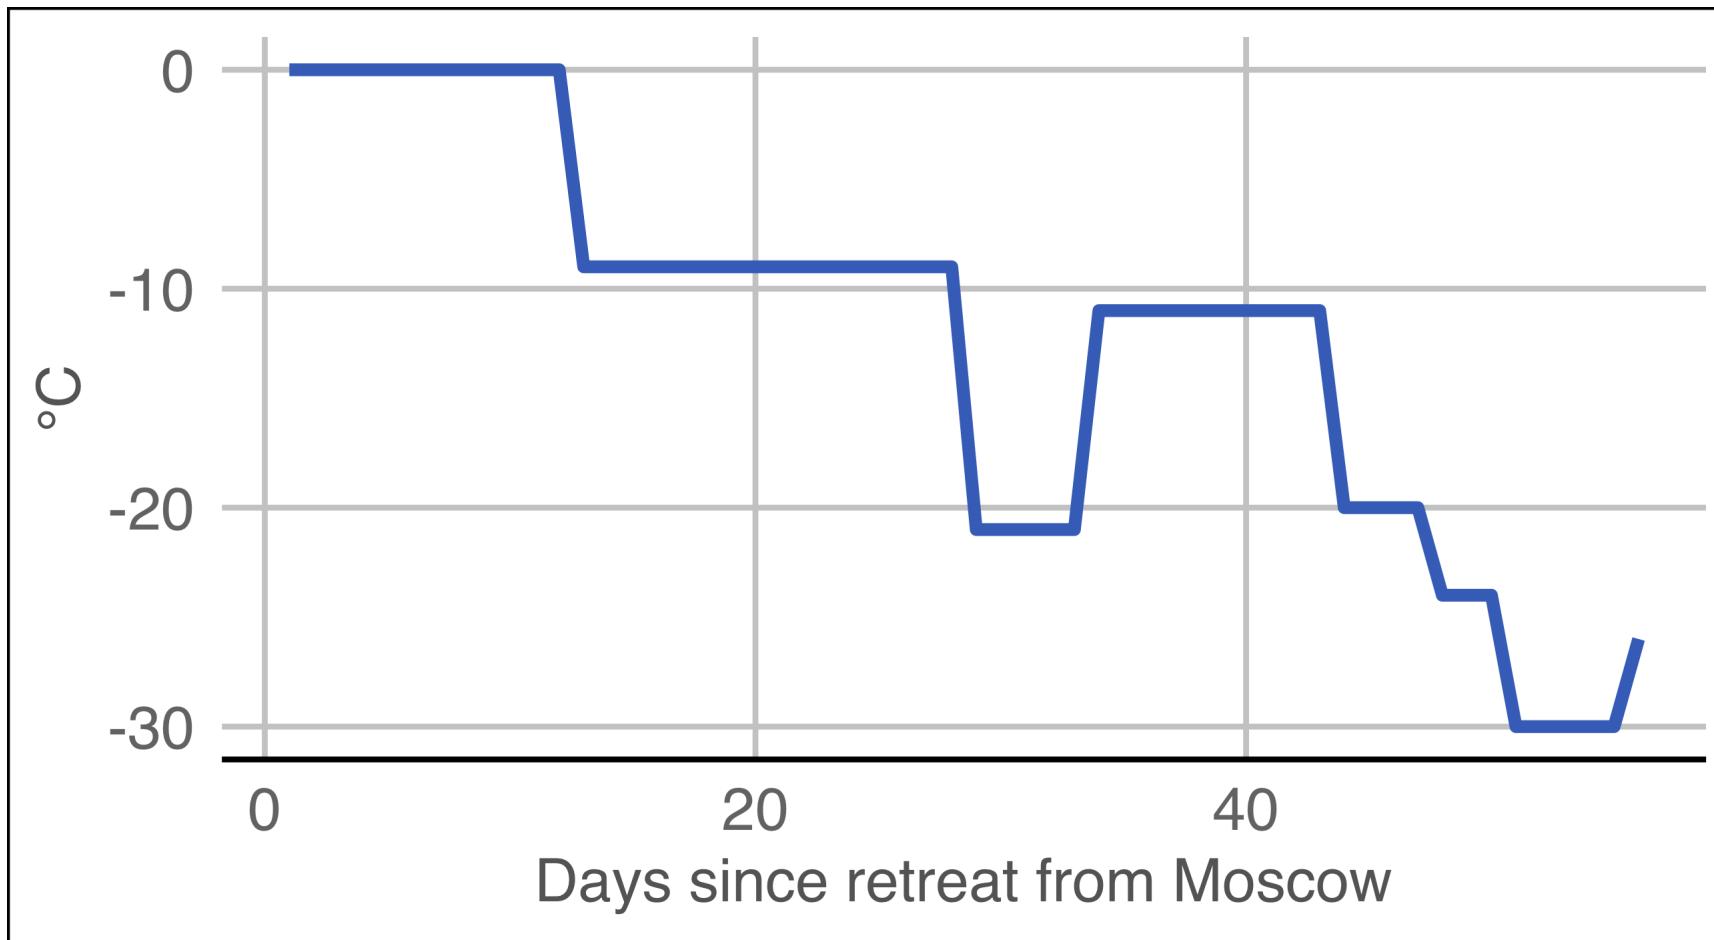

# Long distance!

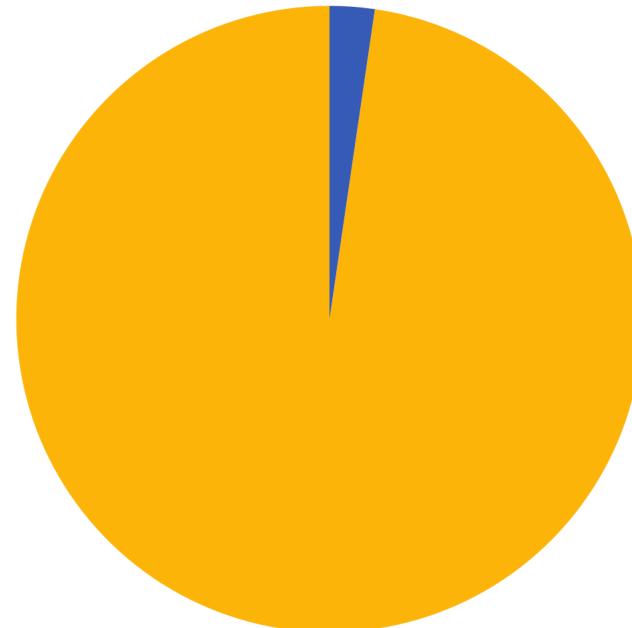

Moscow to Vilnius

# Very cold!

# Lots of people died!

Napoleon's Grande Armée

■ Died ■ Survived

# Carte Figurative des pertes successives en hommes de l'Armée Française dans la Campagne de Russie 1812-1813.

Dessinée par M. Minard, Inspecteur Général des Ponts et Chaussées en retraite  
Paris, le 20 Novembre 1869.

Les nombres d'hommes présents sont représentés par les largeurs des zones colorées à raison d'un millimètre pour dix mille hommes; ils sont de plus écrits en tracés des zones. Le rouge désigne les hommes qui ont été en Russie; le noir ceux qui en sortent. Les renseignements qui ont servi à dresser la carte ont été puisés dans les ouvrages de M.M. Chiers, de Ségur, de Fezensac, de Chambray et le journal inédit de Jacob, pharmacien de l'Armée depuis le 28 Octobre.

Pour mieux faire juger à l'œil la diminution de l'armée, j'ai supposé que les corps du Prince Jérôme et du Maréchal Davout qui avaient été détachés sur Minsk et Mobilow et qui rejoignirent Orsha en Witebsk, avaient toujours marché avec l'armée.

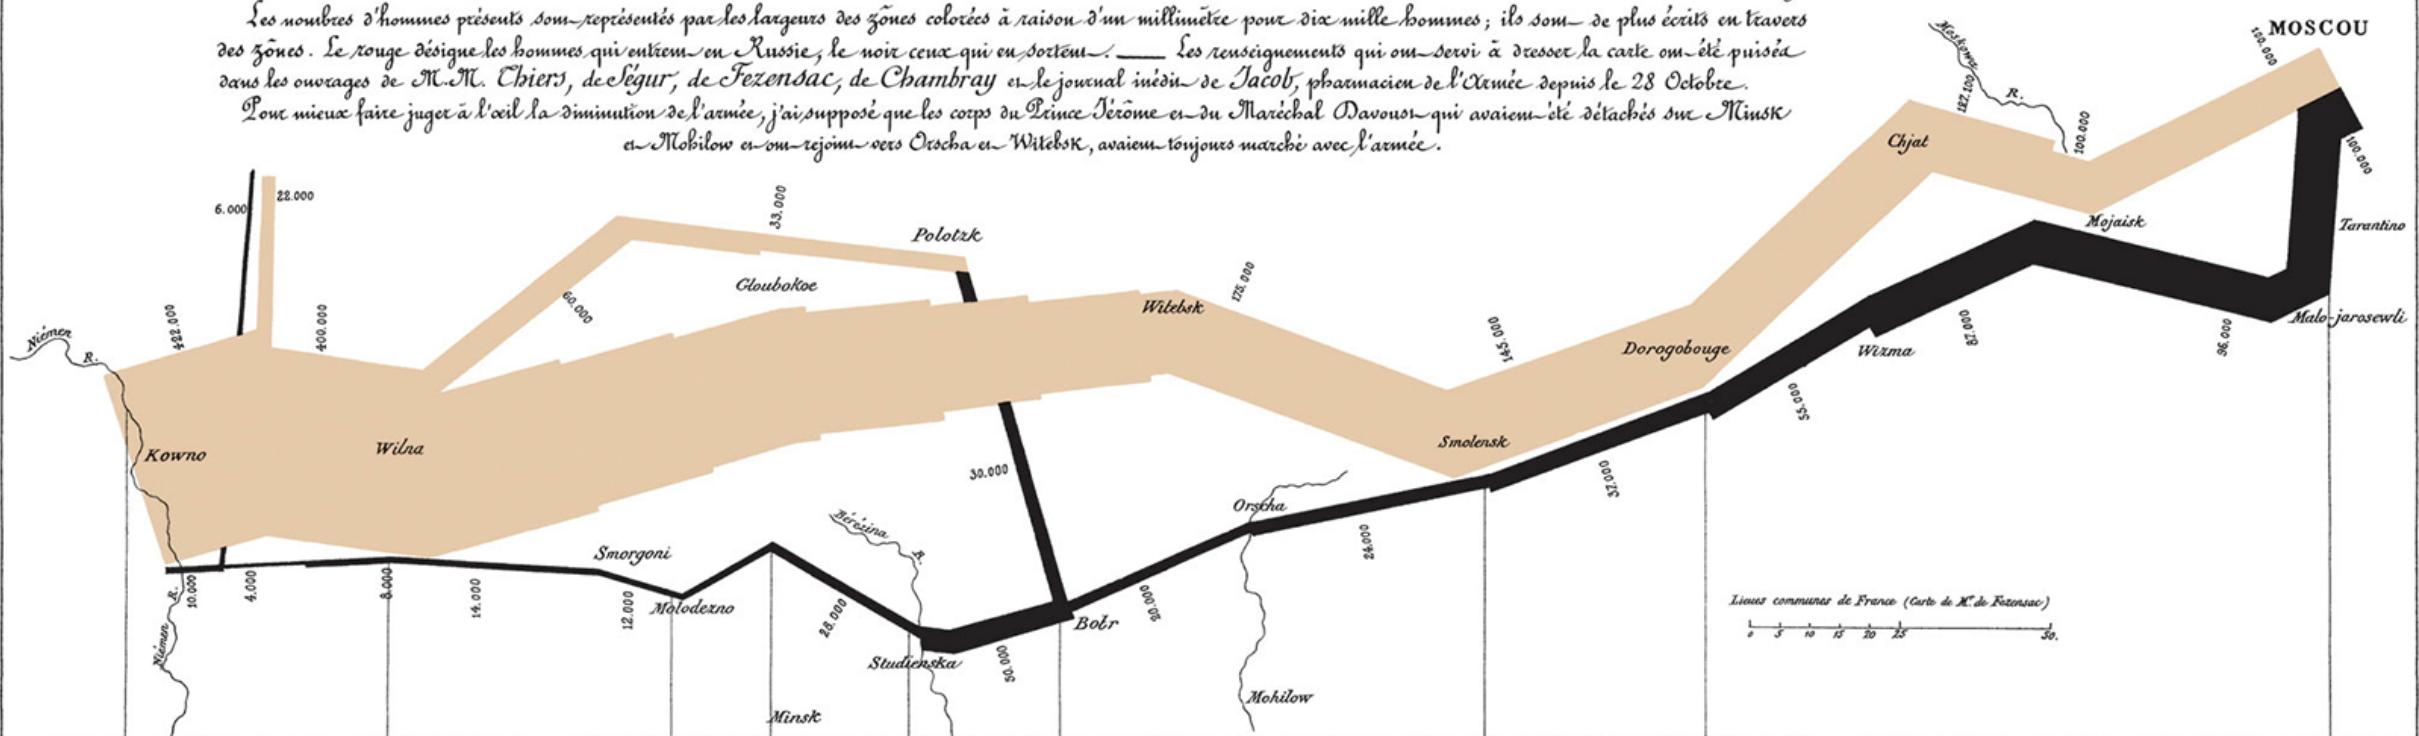

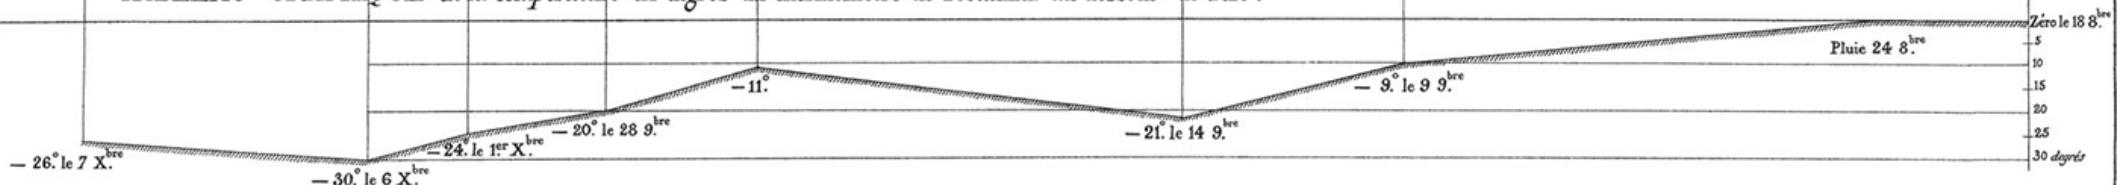

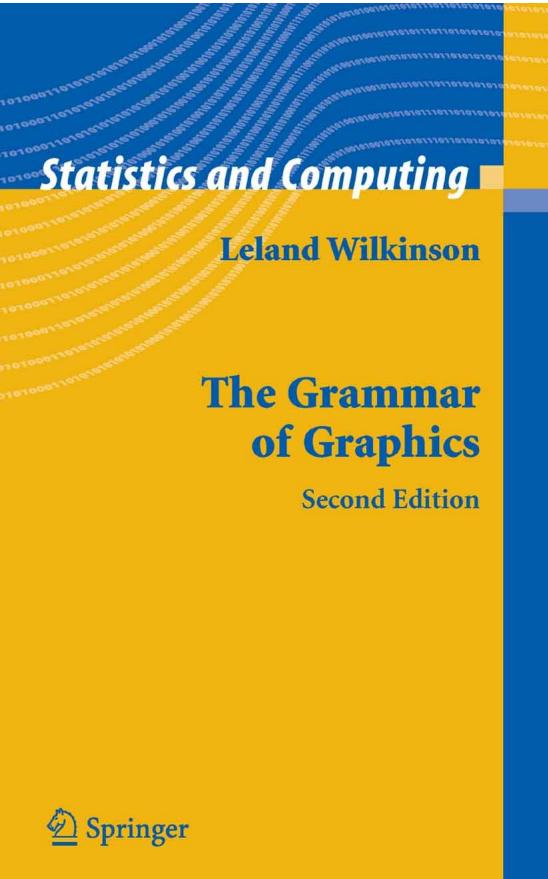

TABLEAU GRAPHIQUE de la température en degrés du thermomètre de Réaumur au dessous de zéro.

Les Cosaques passent au galop  
le Niemen gelé.

# Mapping data to aesthetics

Aesthetic

Visual property of a graph

Position, shape, color, etc.

Data

A column in a dataset

# Mapping data to aesthetics

Data	Aesthetic	Graphic/Geometry
Longitude	Position (x-axis)	Point
Latitude	Position (y-axis)	Point
Army size	Size	Path
Army direction	Color	Path
Date	Position (x-axis)	Line + text
Temperature	Position (y-axis)	Line + text

# Mapping data to aesthetics

---

Data	aes()	geom
Longitude	x	geom_point()
Latitude	y	geom_point()
Army size	size	geom_path()
Army direction	color	geom_path()
Date	x	geom_line() + geom_text()
Temperature	y	geom_line() + geom_text()

---

# ggplot() template

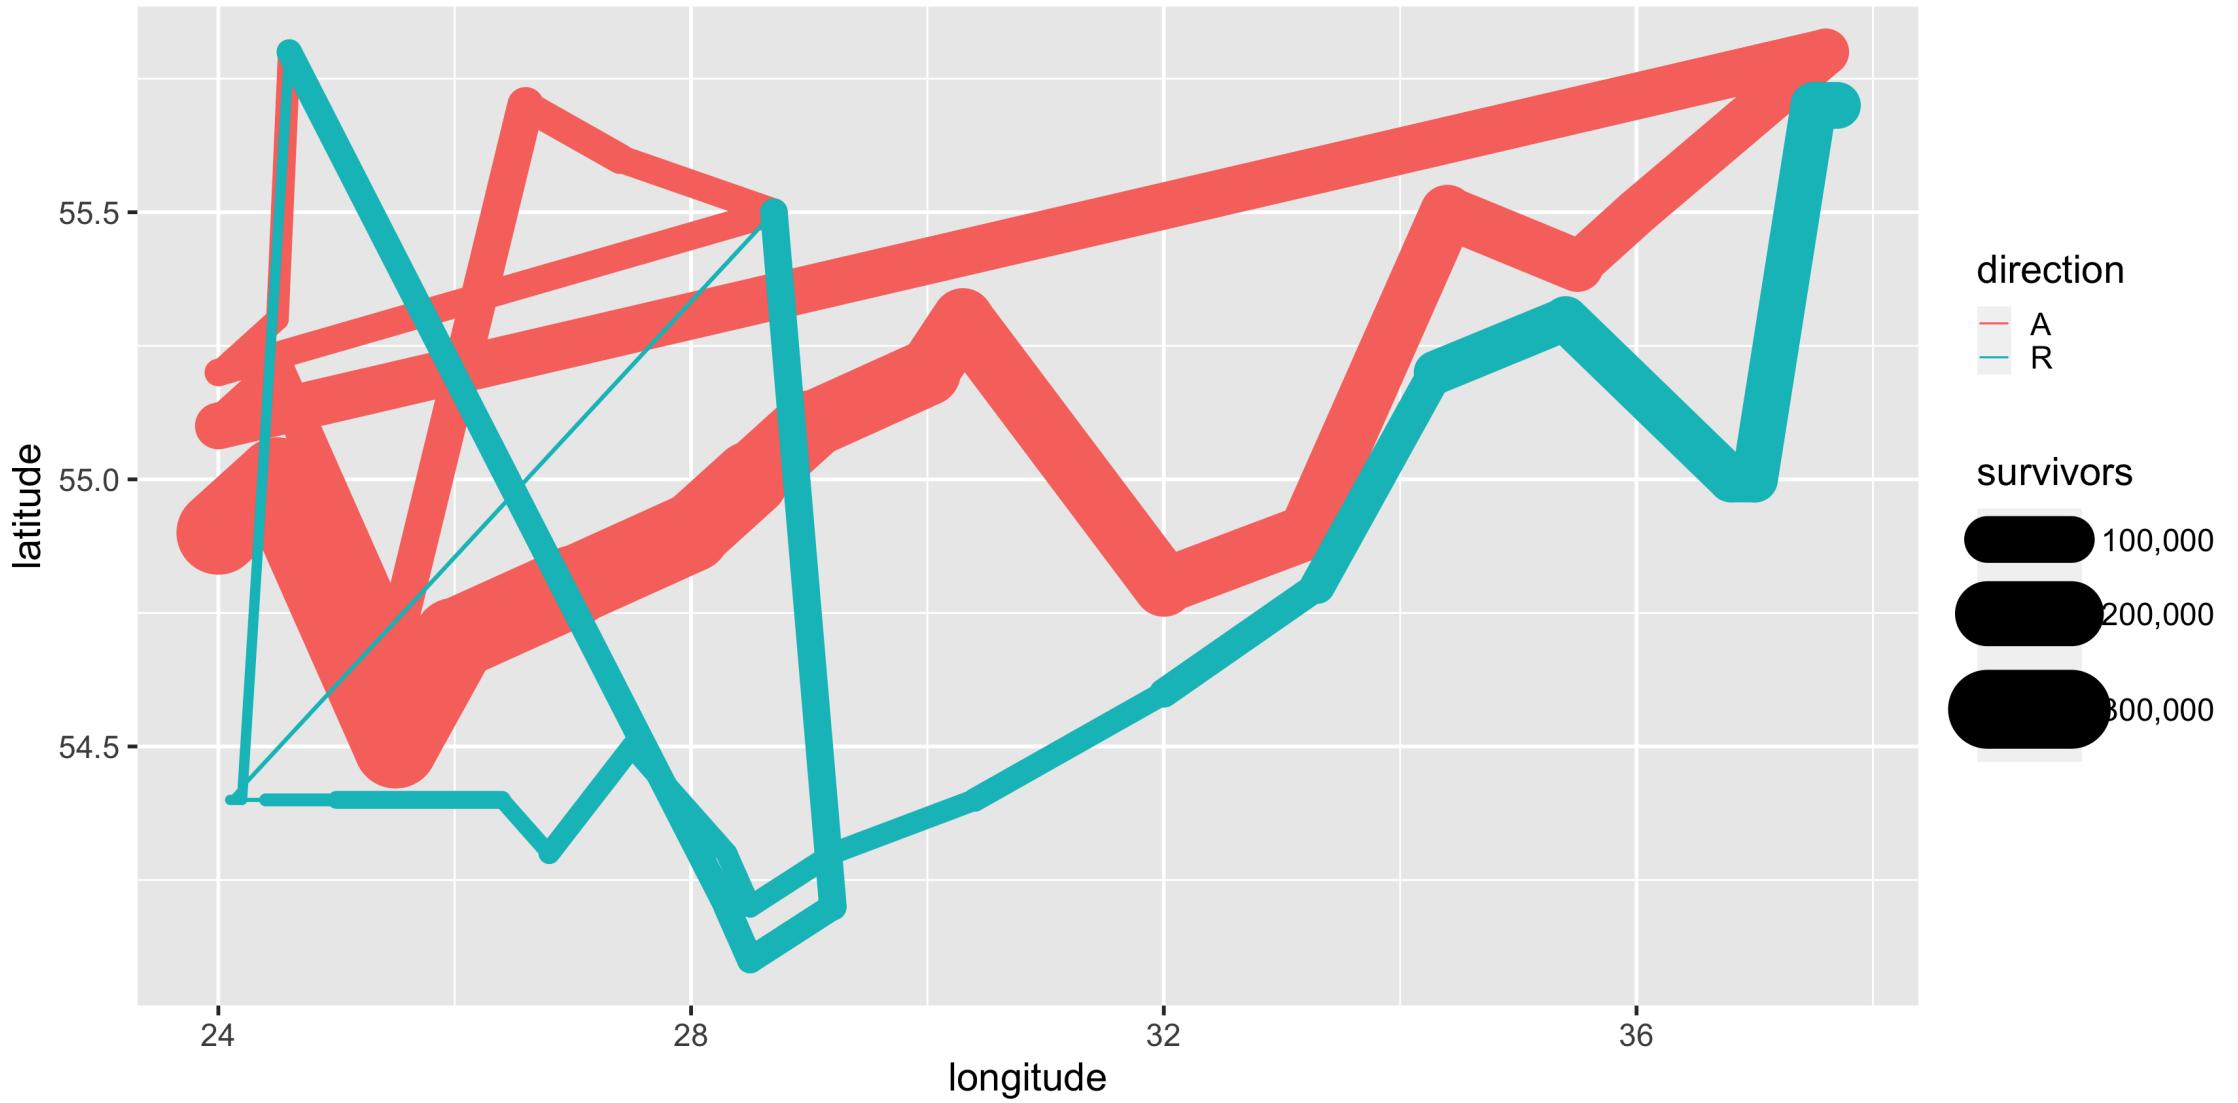

```
ggplot(data = DATA) +  
  GEOM_FUNCTION(mapping = aes(AESTHETIC MAPPINGS))
```

```
ggplot(data = troops) +  
  geom_path(mapping = aes(x = longitude,  
                          y = latitude,  
                          color = direction,  
                          size = survivors))
```

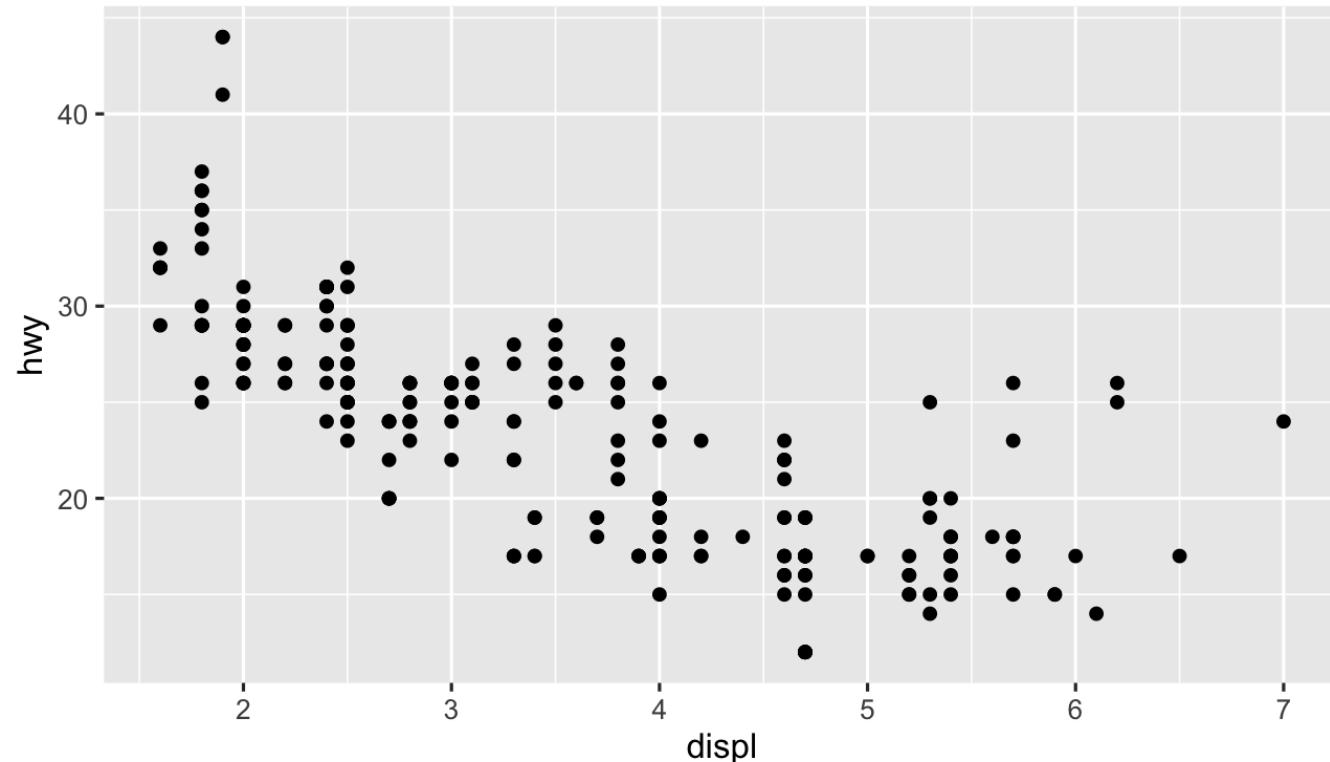

This is a dataset named `troops`:

<b>longitude</b>	<b>latitude</b>	<b>direction</b>	<b>survivors</b>
24	54.9	A	340000
24.5	55	A	340000
...	...	...	...

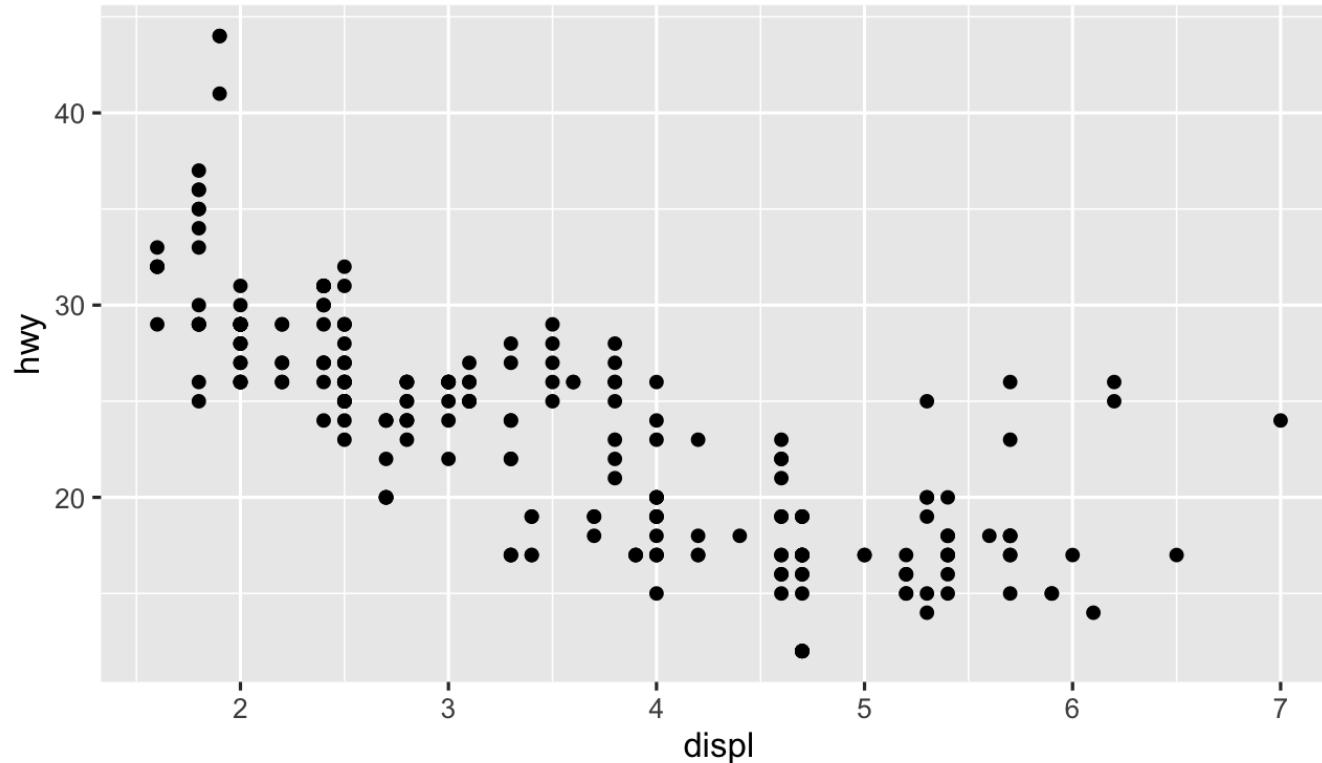

```
ggplot(data = troops) +  
  geom_path(mapping = aes(x = longitude,  
                           y = latitude,  
                           color = direction,  
                           size = survivors))
```

```
ggplot(data = mpg) +  
  geom_point(mapping = aes(x = displ, y = hwy))
```

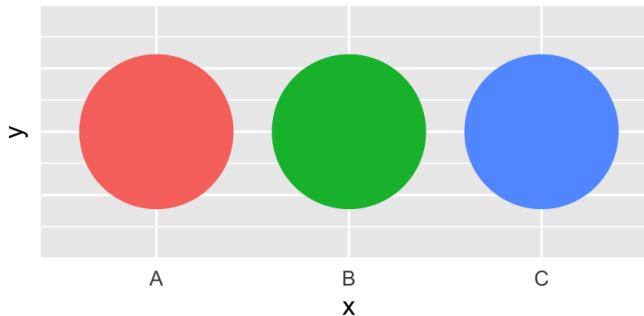

# Heavy cars with better mileage?

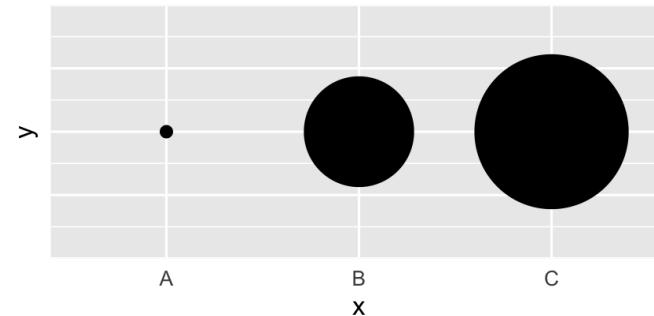

# Aesthetics

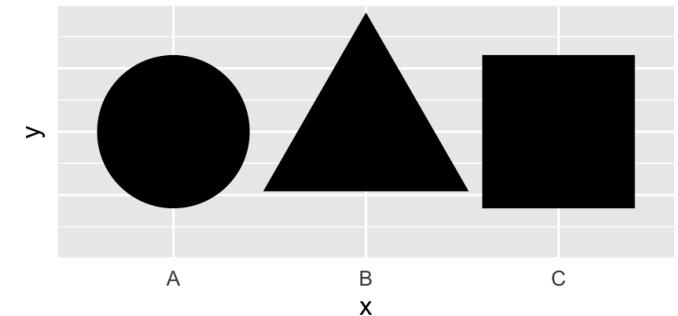

**color (discrete)**

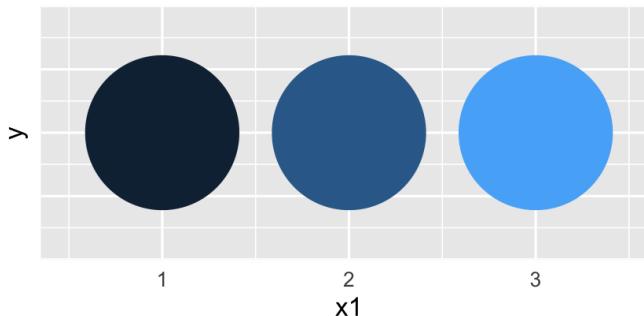

**size**

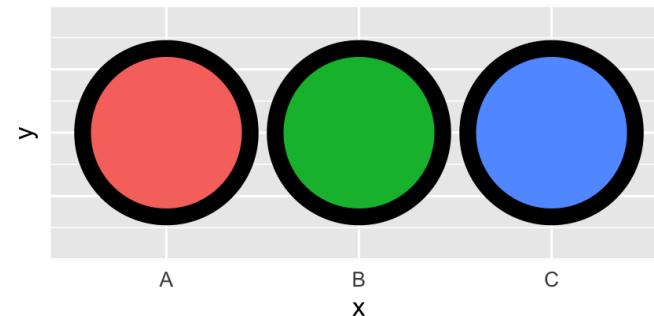

**shape**

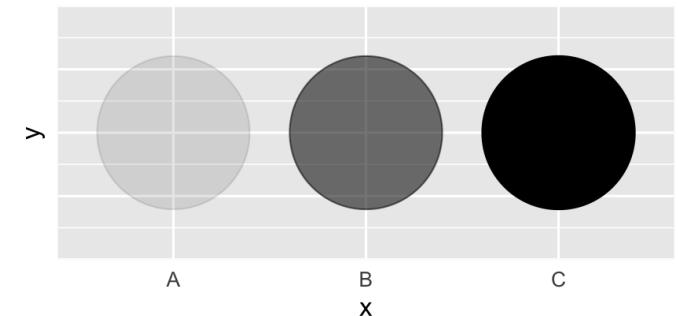

**color (continuous)**

**fill**

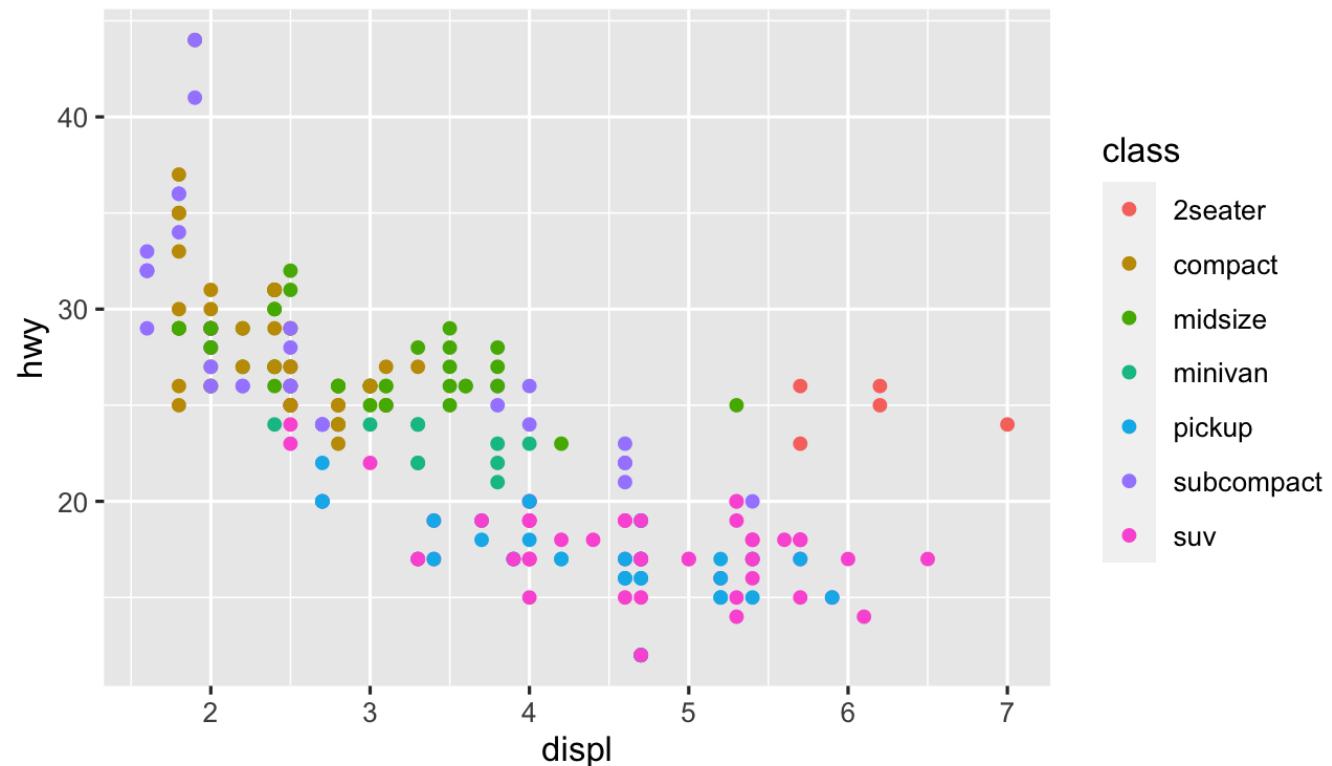

**alpha**

# Mapping columns to aesthetics

```
ggplot(mpg) + geom_point(aes(x = displ, y = hwy, color = class))  
ggplot(mpg) + geom_point(aes(x = displ, y = hwy, size = class))  
ggplot(mpg) + geom_point(aes(x = displ, y = hwy, shape = class))  
ggplot(mpg) + geom_point(aes(x = displ, y = hwy, alpha = class))
```

```
ggplot(data = mpg) +  
  geom_point(mapping = aes(x = displ, y = hwy, color = class))
```

# Your turn #2

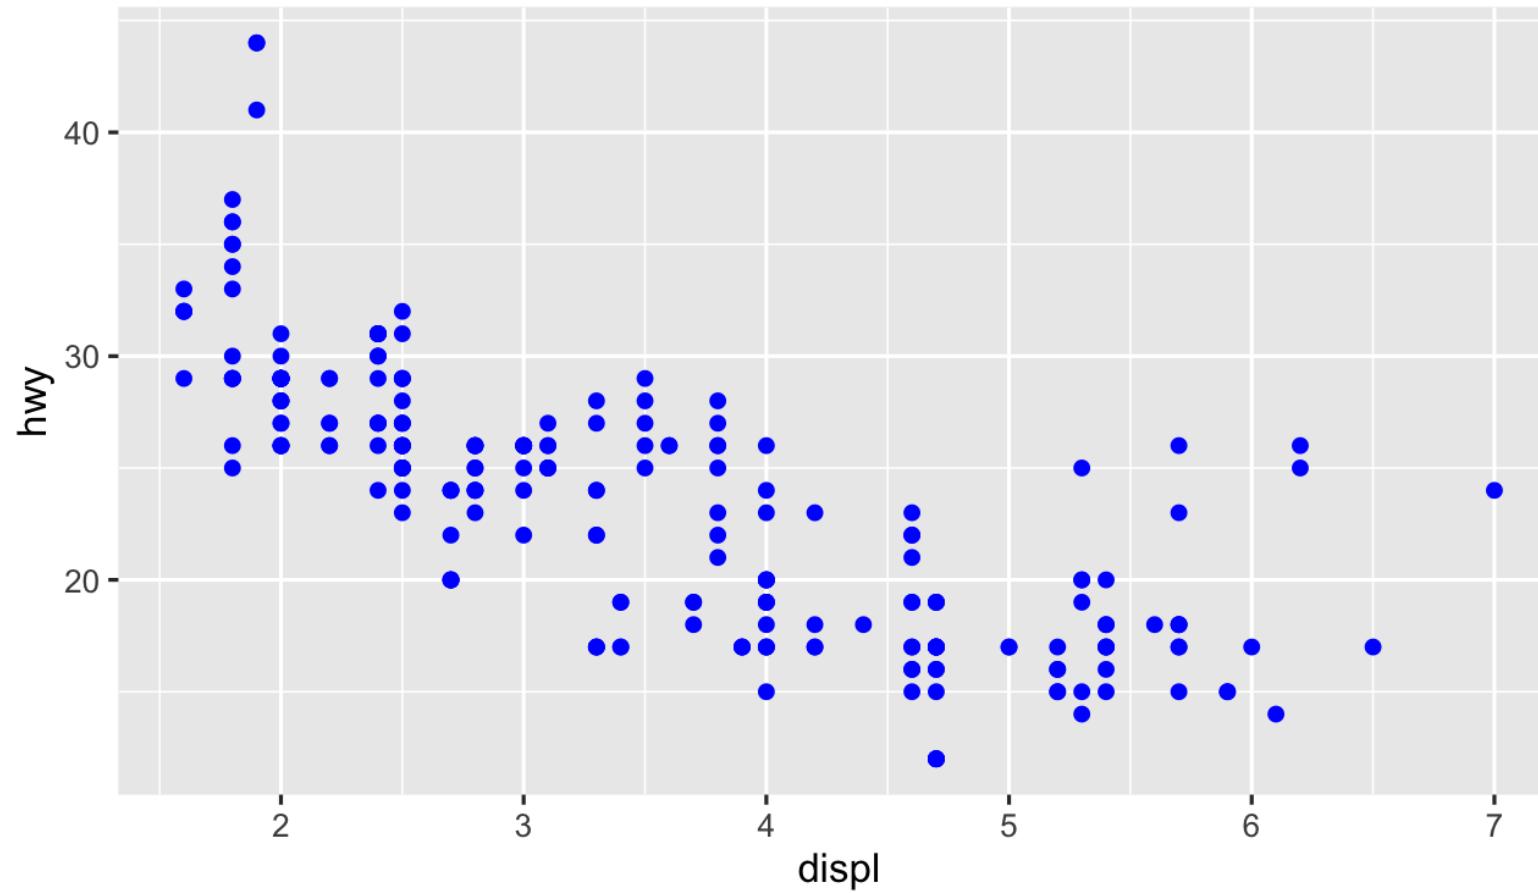

Add color, size, alpha, and shape aesthetics to your graph.

Experiment!

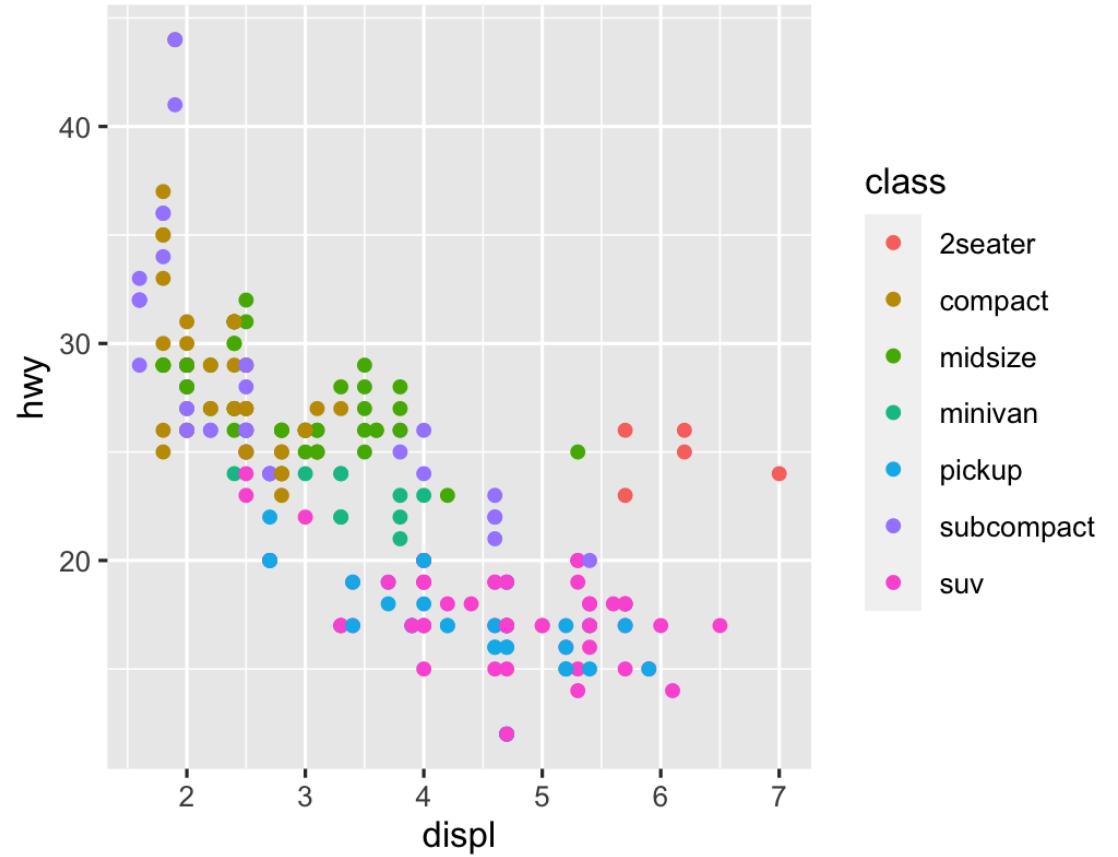

Do different things happen when you map aesthetics to discrete and continuous variables?

What happens when you use more than one aesthetic?

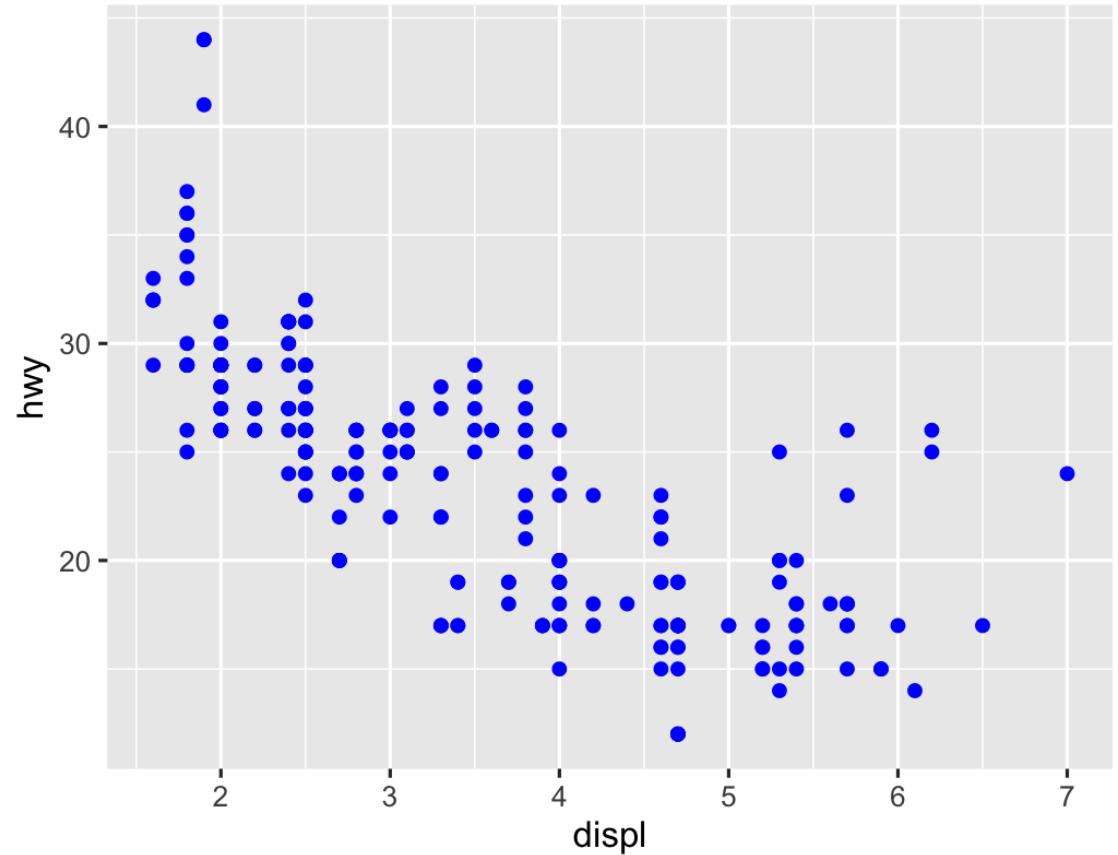

# How would you make this plot?

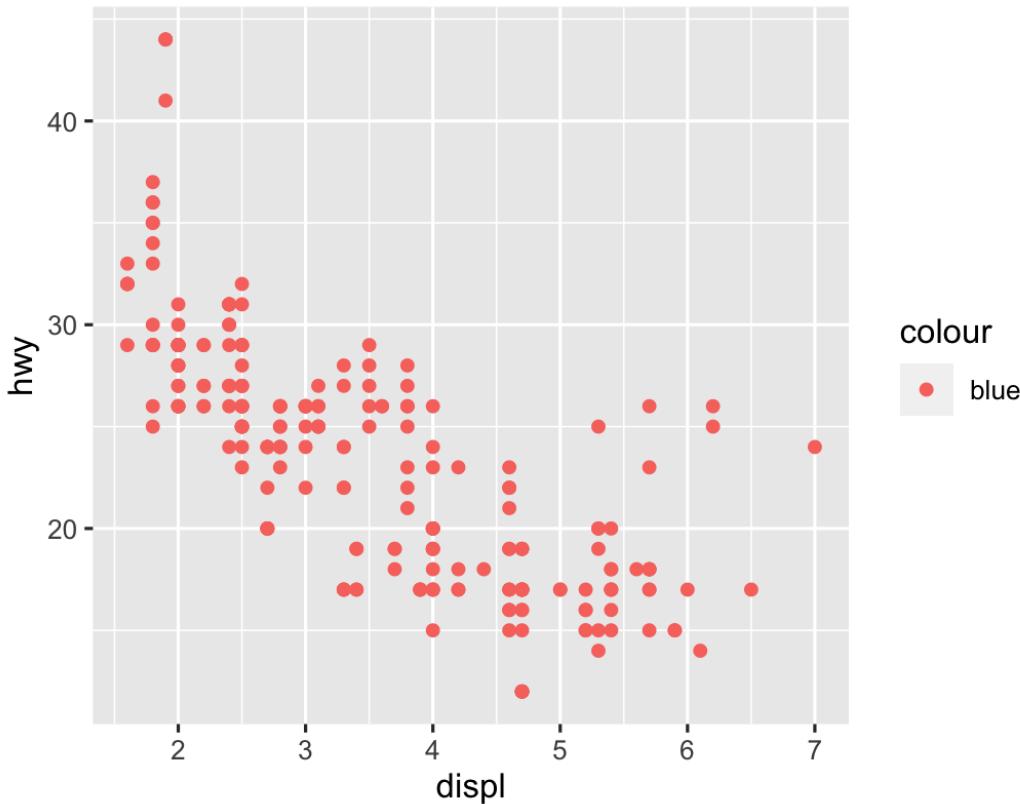

```
ggplot(mpg) +  
  geom_point(aes(x = displ, y = hwy,  
                 color = class))
```

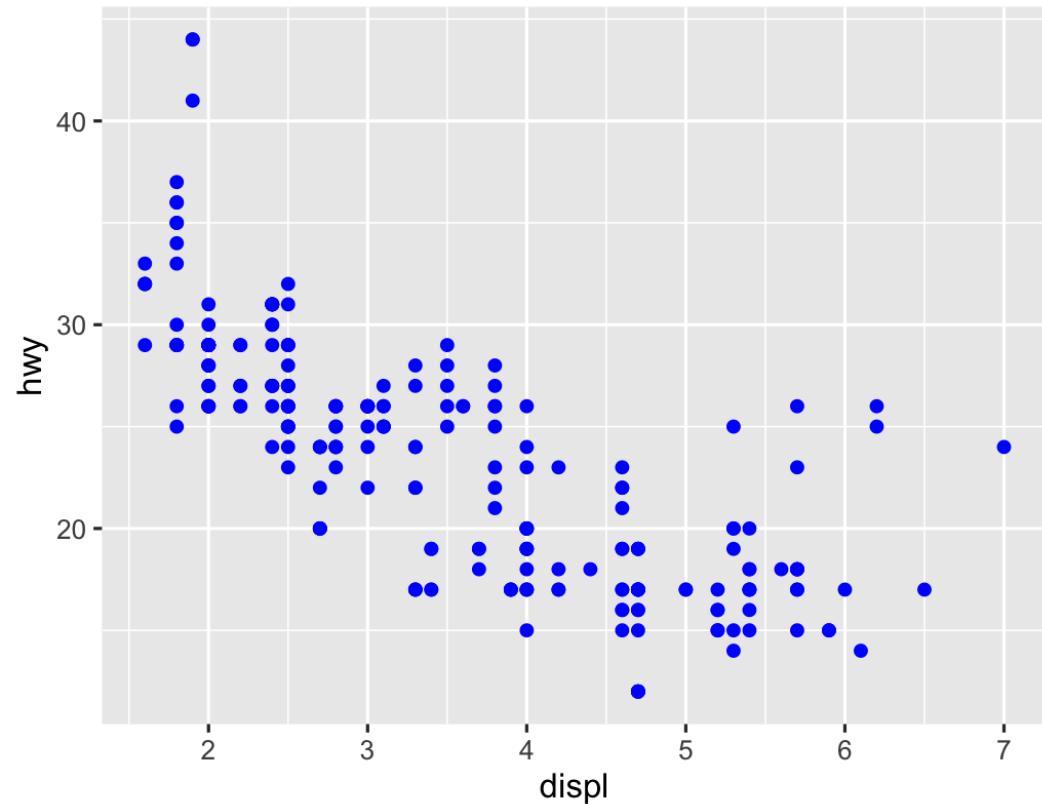

```
ggplot(mpg) +  
  geom_point(aes(x = displ, y = hwy),  
             color = "blue")
```

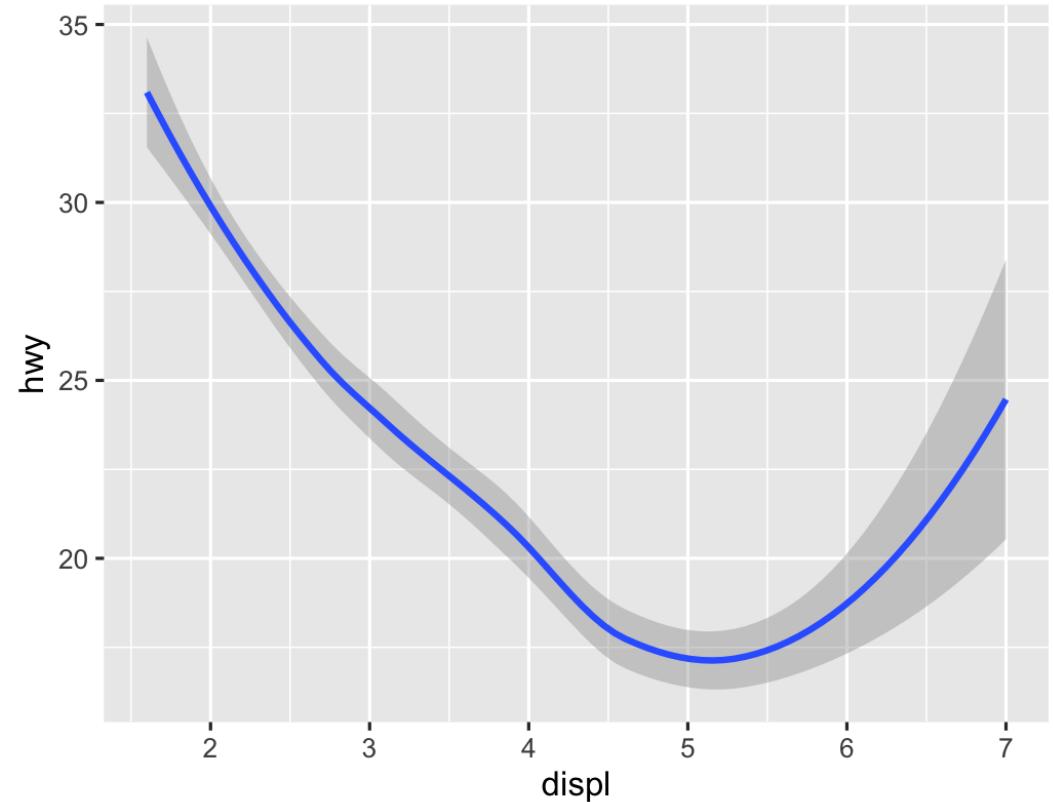

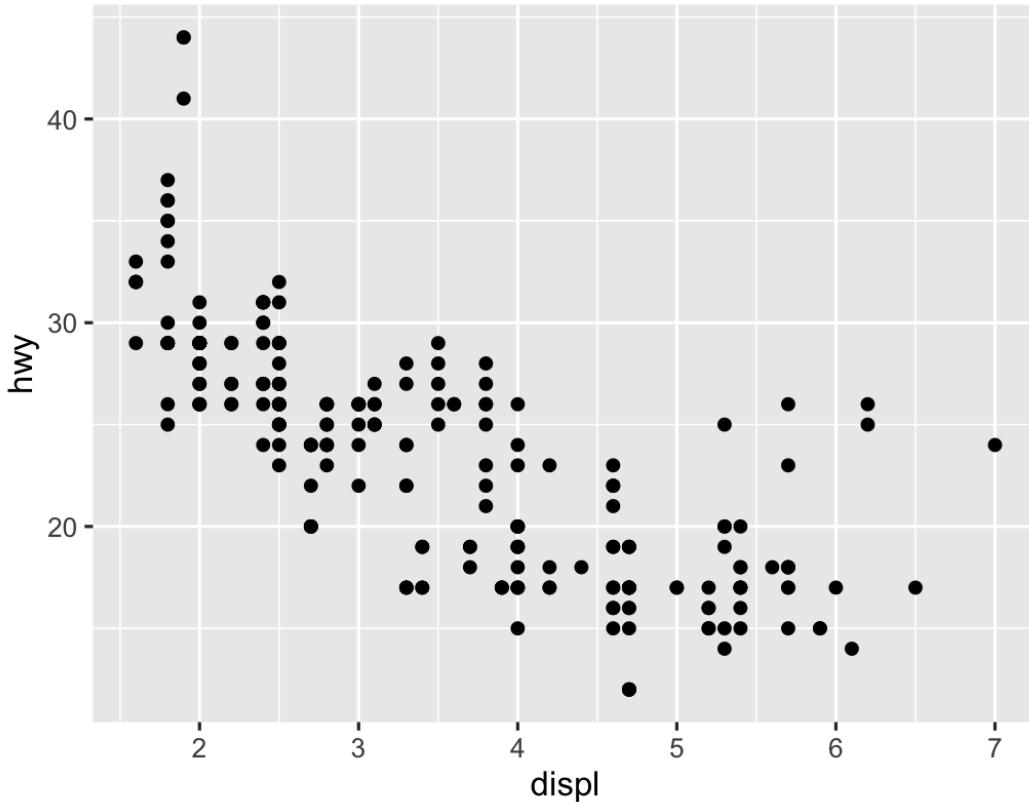

```
ggplot(mpg) +  
  geom_point(aes(x = displ, y = hwy,  
                 color = "blue"))
```

```
ggplot(mpg) +  
  geom_point(aes(x = displ, y = hwy))  
  color = "blue")
```

# What's the same? What's different?

# Geoms

```
ggplot(data = DATA) +  
  GEOM_FUNCTION(mapping = aes(AESTHETIC MAPPINGS))
```

# Possible geoms

Example geom	What it makes
	<code>geom_col()</code> Bar charts
	<code>geom_text()</code> Text
	<code>geom_point()</code> Points
	<code>geom_boxplot()</code> Boxplots
	<code>geom_sf()</code> Maps

# Possible geoms

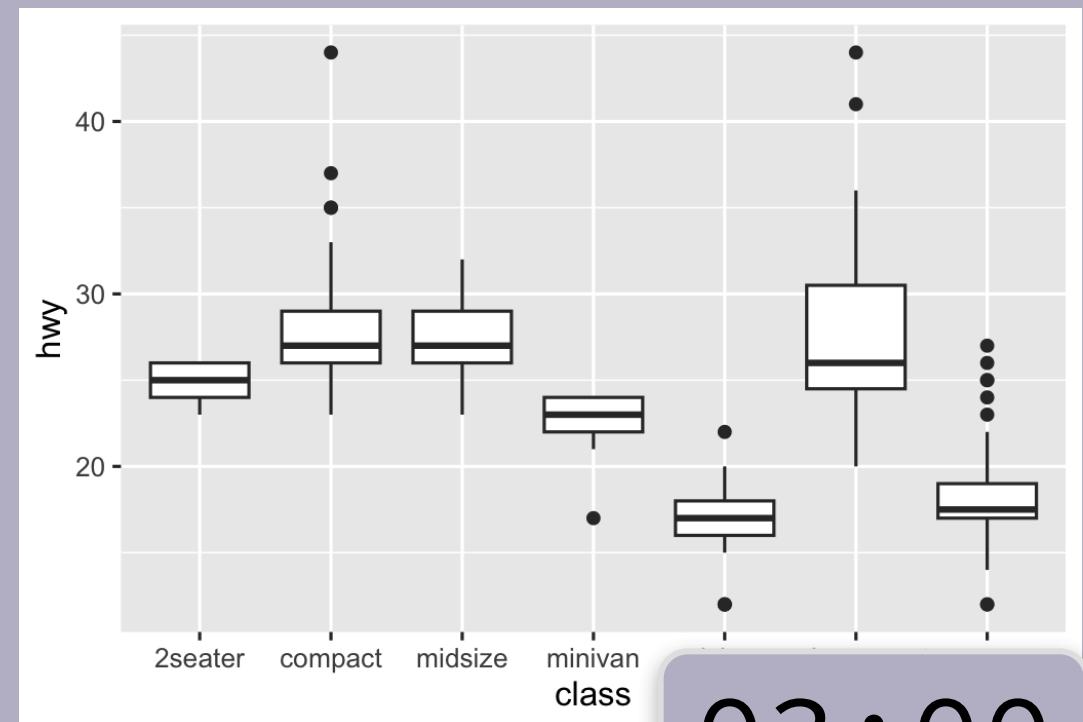

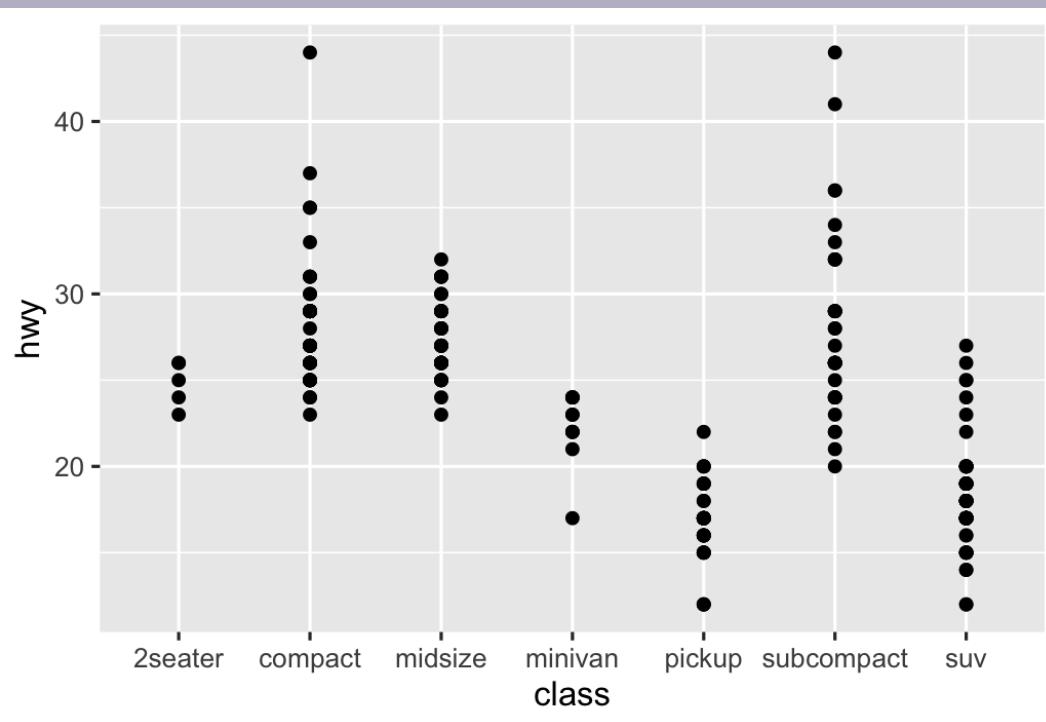

There are dozens of possible geoms!

See [the ggplot2 documentation](#) for complete examples of all the different geom layers

Also see the [ggplot cheatsheet](#)

# Your turn #3

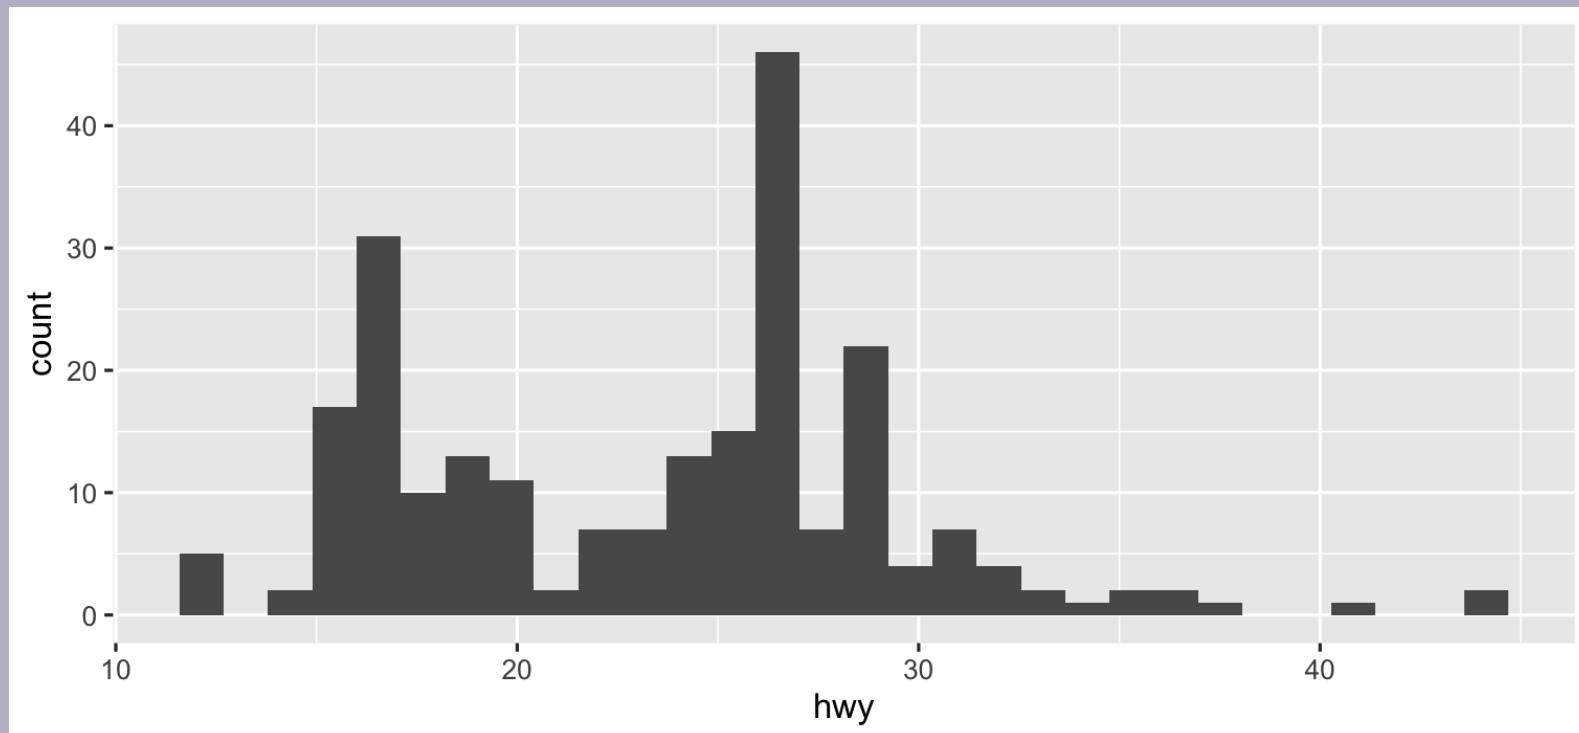

Replace this scatterplot with boxplots. Use the cheatsheet.

03 : 00

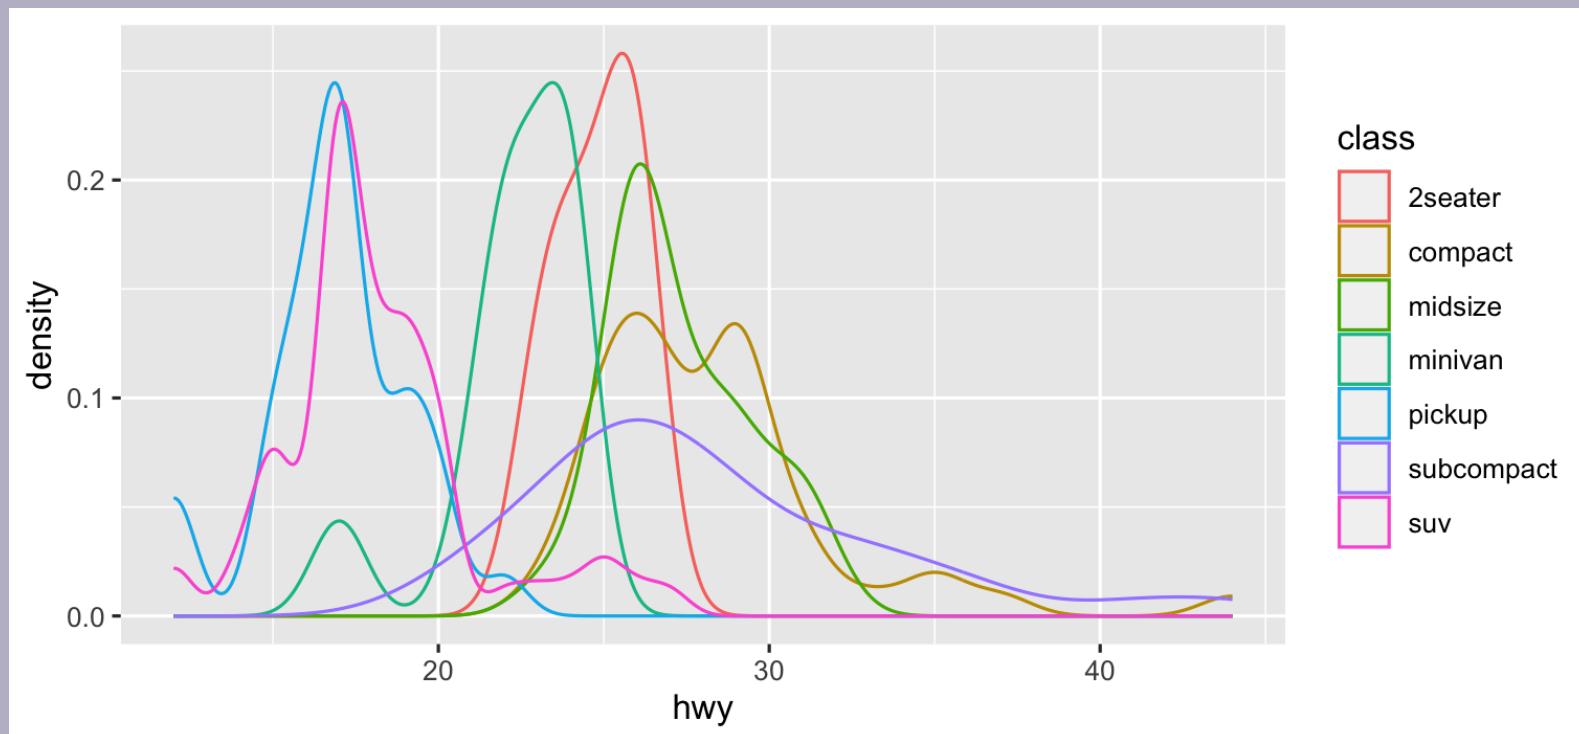

# Your turn #4

Make a histogram of `hwy`. Use the cheatsheet.  
Hint: don't supply a `y` variable.

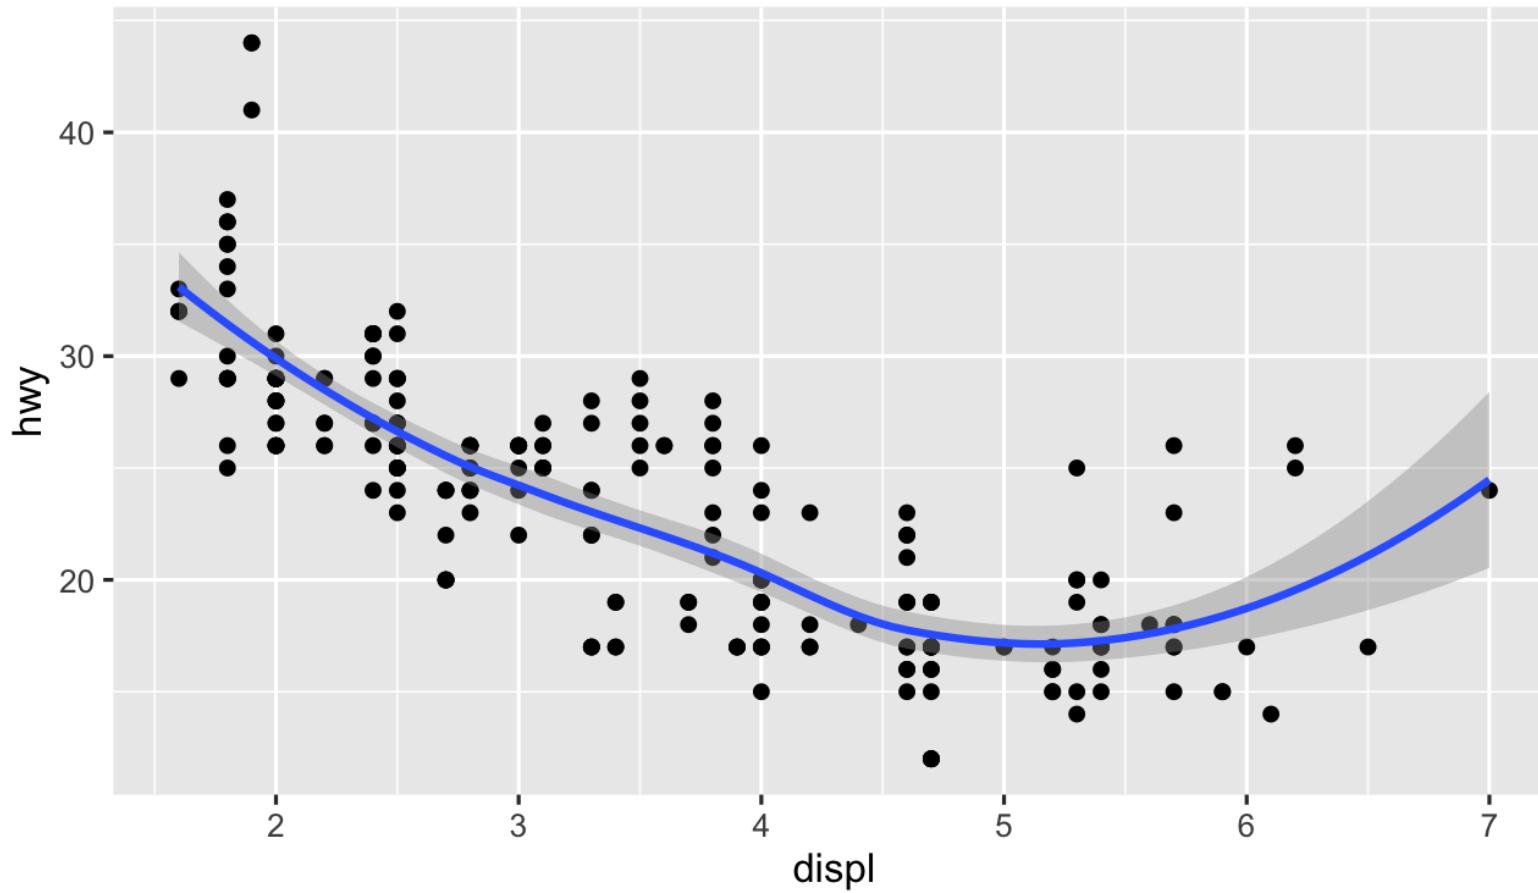

# Your turn #5

Make this density plot of `hwy` colored by `class`.  
Use the cheatsheet. Hint: don't supply a `y` variable.

# Complex graphs!

# Your turn #6

**Predict what this code will do. Then run it.**

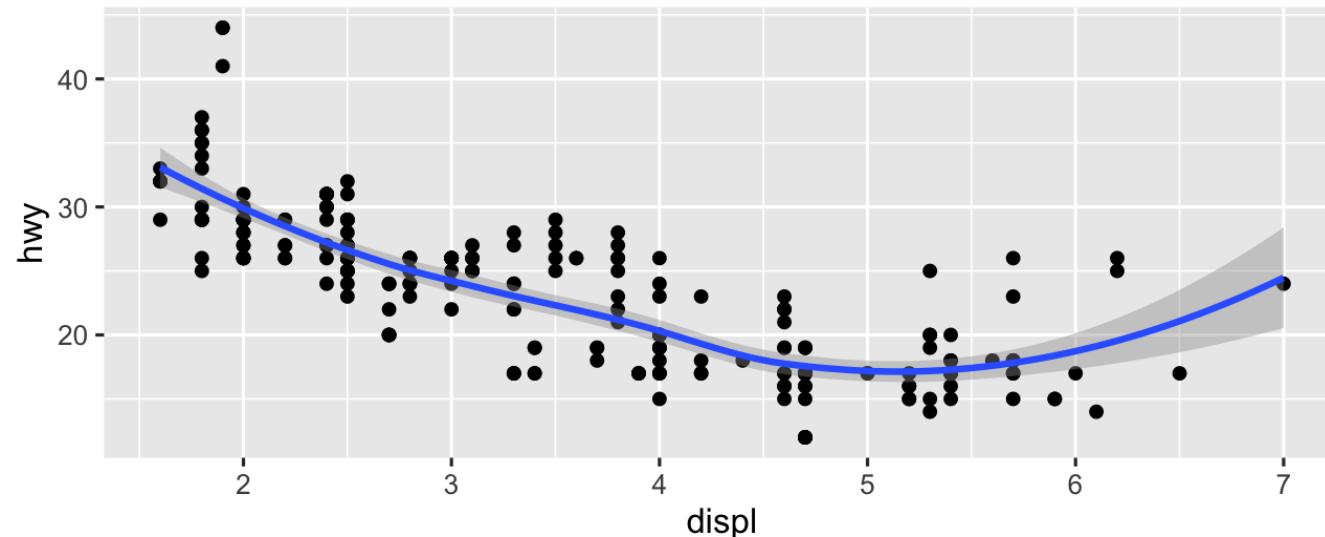

```
ggplot(data = mpg) +  
  geom_point(mapping = aes(x = displ, y = hwy)) +  
  geom_smooth(mapping = aes(x = displ, y = hwy))
```

02:00

# Global vs. local

**Any aesthetics in `ggplot()` will show up in all `geom_` layers**

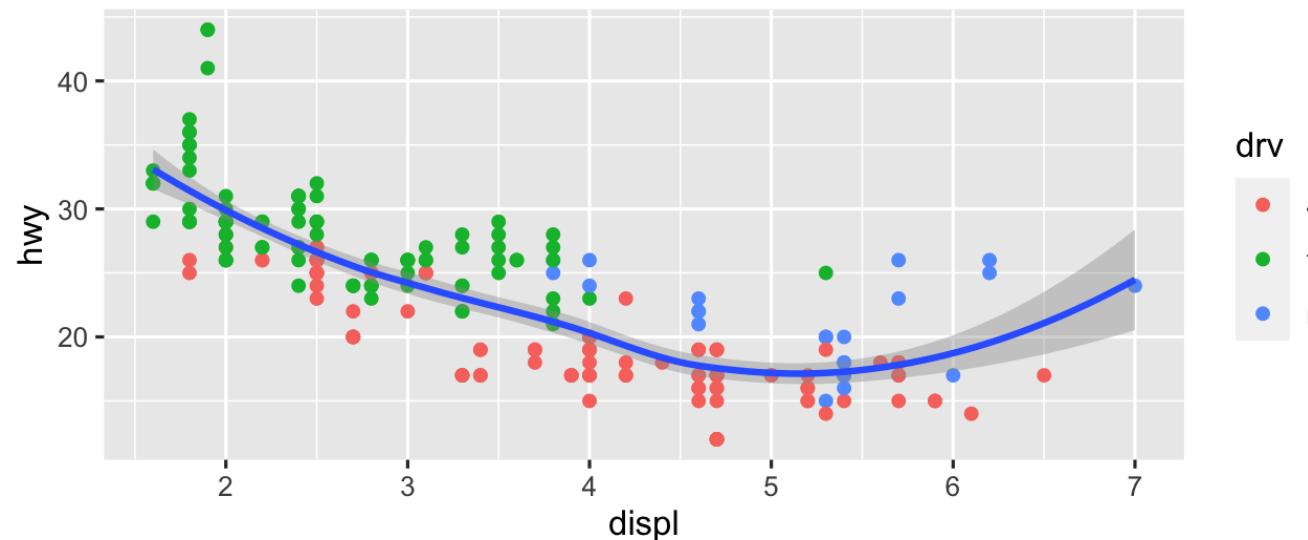

```
ggplot(data = mpg, mapping = aes(x = displ, y = hwy)) +  
  geom_point() +  
  geom_smooth()
```

# Global vs. local

**Any aesthetics in `geom_` layers only apply to that layer**

```
ggplot(data = mpg, mapping = aes(x = displ, y = hwy)) +  
  geom_point(mapping = aes(color = drv)) +  
  geom_smooth()
```

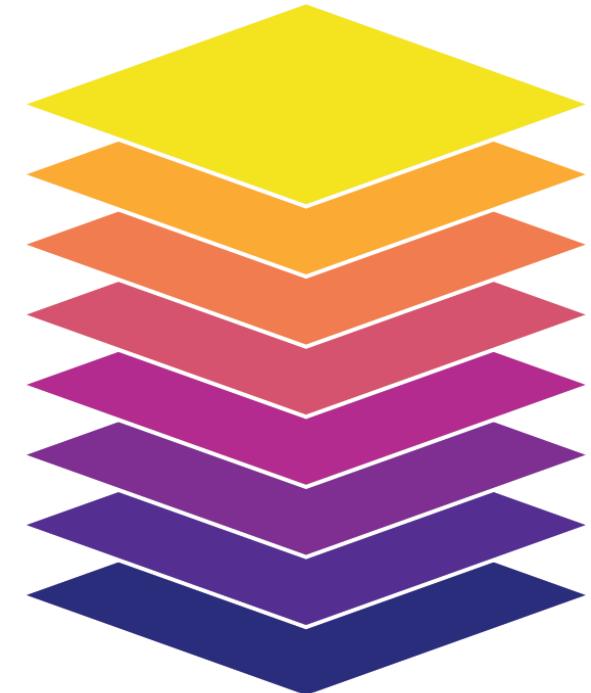

# So much more!

There are many other layers we can use to make and enhance graphs!

We sequentially add layers onto the foundational `ggplot()` plot to create complex figures

Theme  
Labels  
Coordinates  
Facets  
Scales  
Geometries  
Aesthetics  
Data

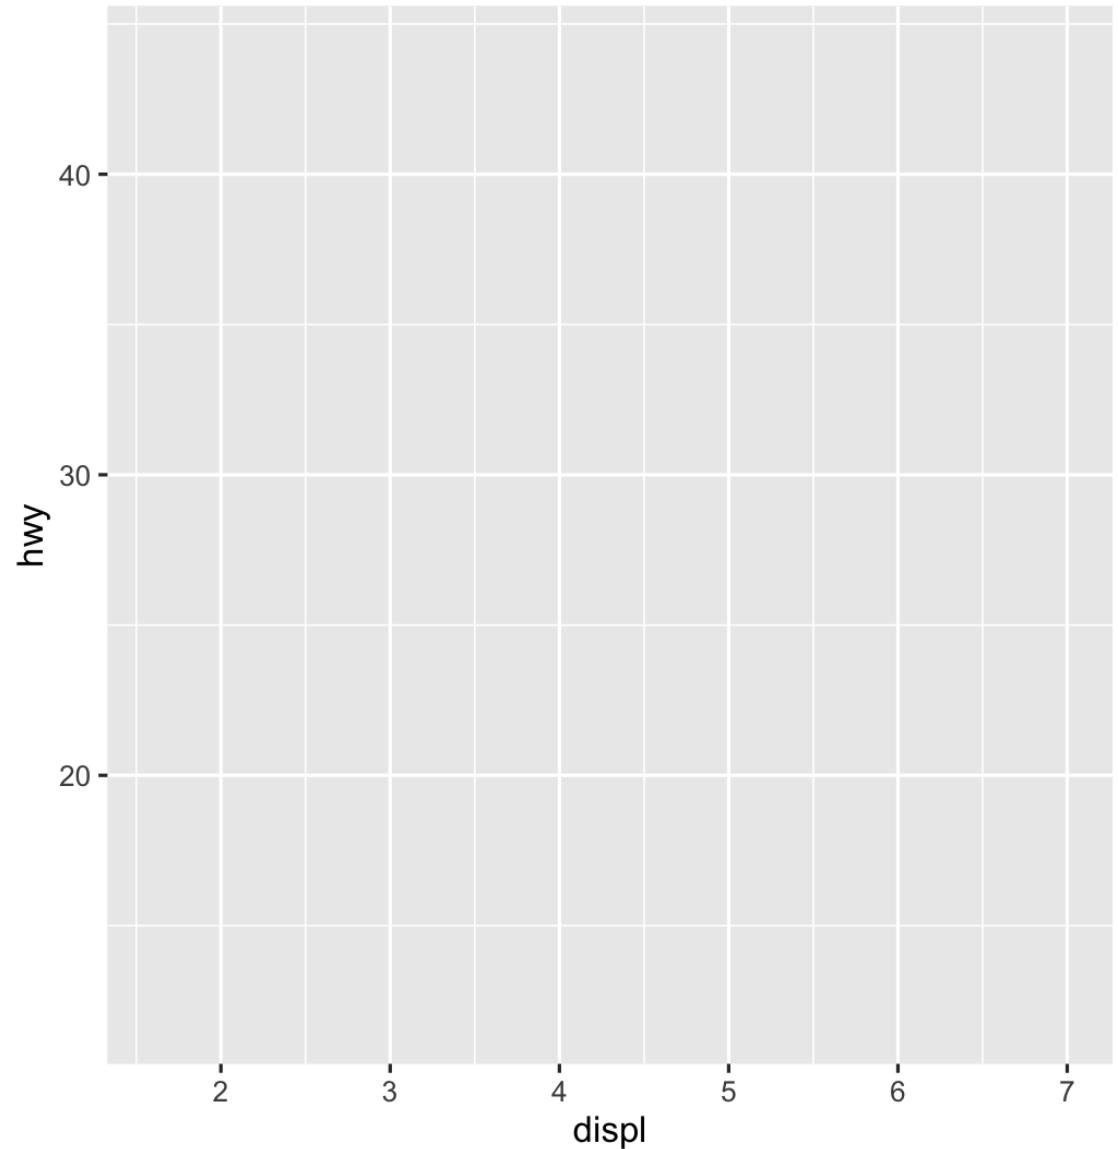

# Putting it all together

We can build a plot sequentially  
to see how each grammatical layer  
changes the appearance

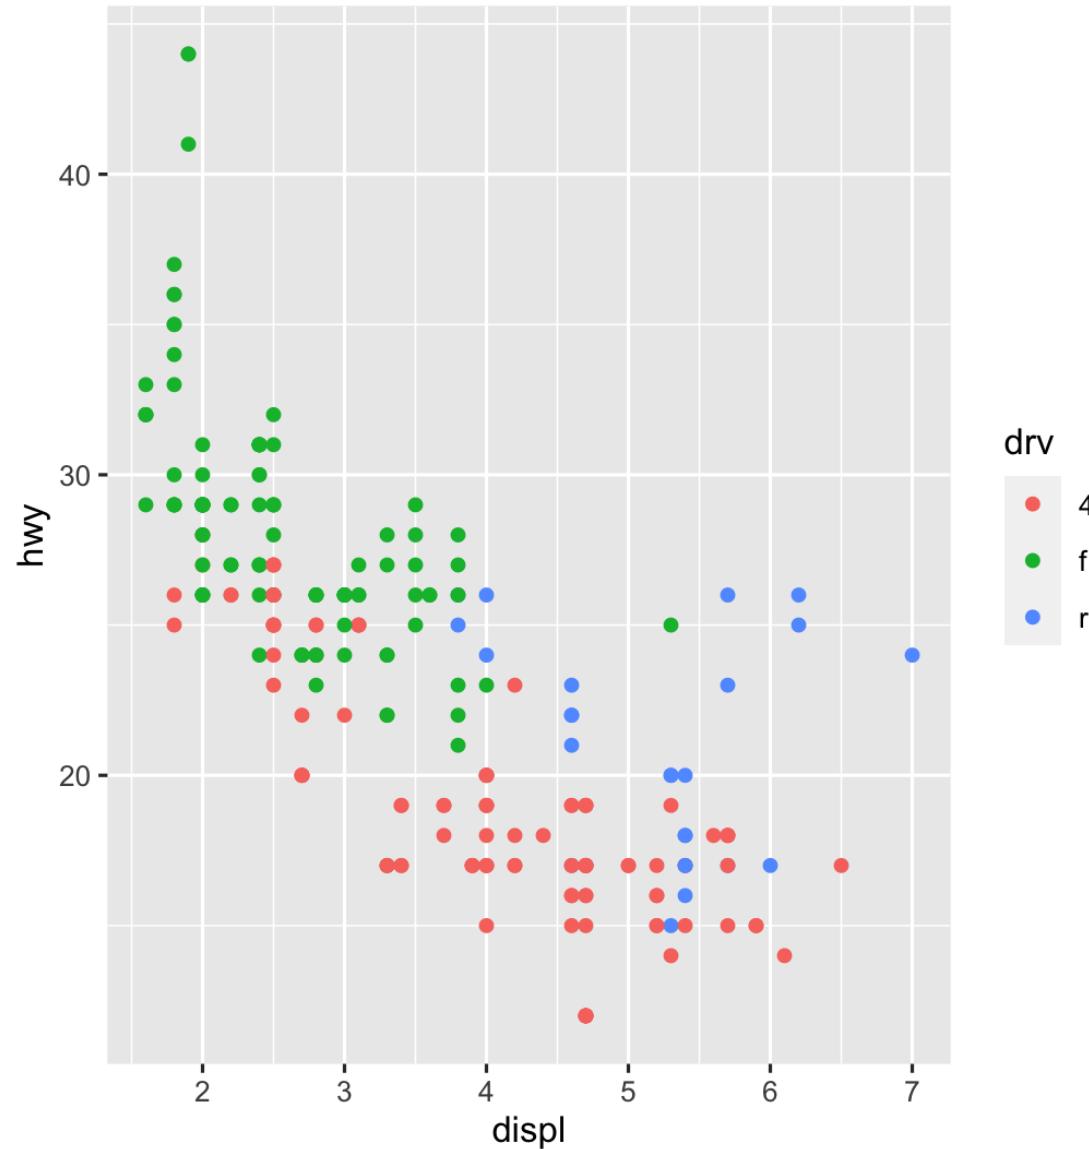

# Start with data and aesthetics

```
ggplot(data = mpg,  
       mapping = aes(x = displ,  
                      y = hwy,  
                      color = drv))
```

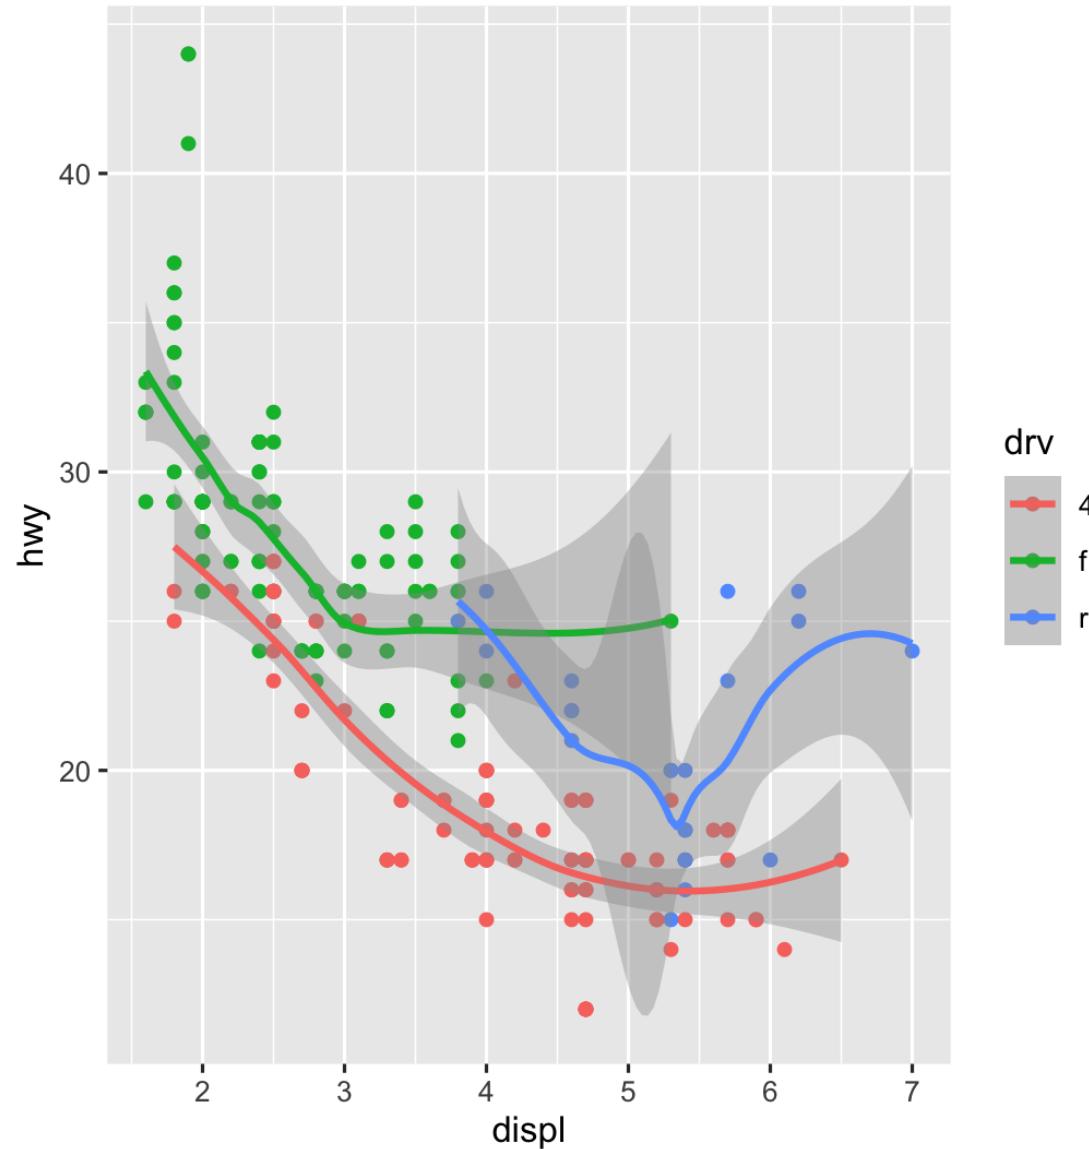

# Add a point geom

```
ggplot(data = mpg,  
       mapping = aes(x = displ,  
                      y = hwy,  
                      color = drv)) +  
  geom_point()
```

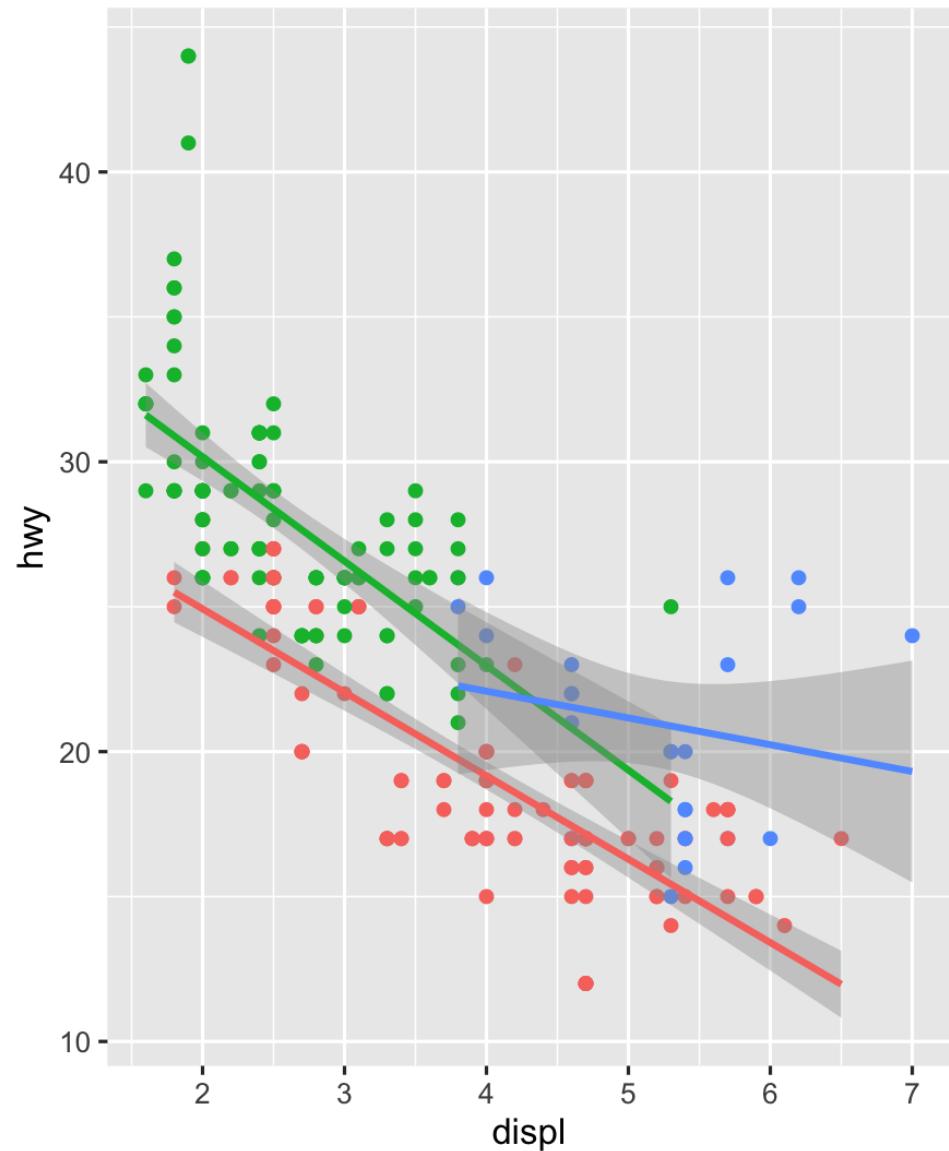

# Add a smooth geom

```
ggplot(data = mpg,  
       mapping = aes(x = displ,  
                      y = hwy,  
                      color = drv)) +  
  geom_point() +  
  geom_smooth()
```

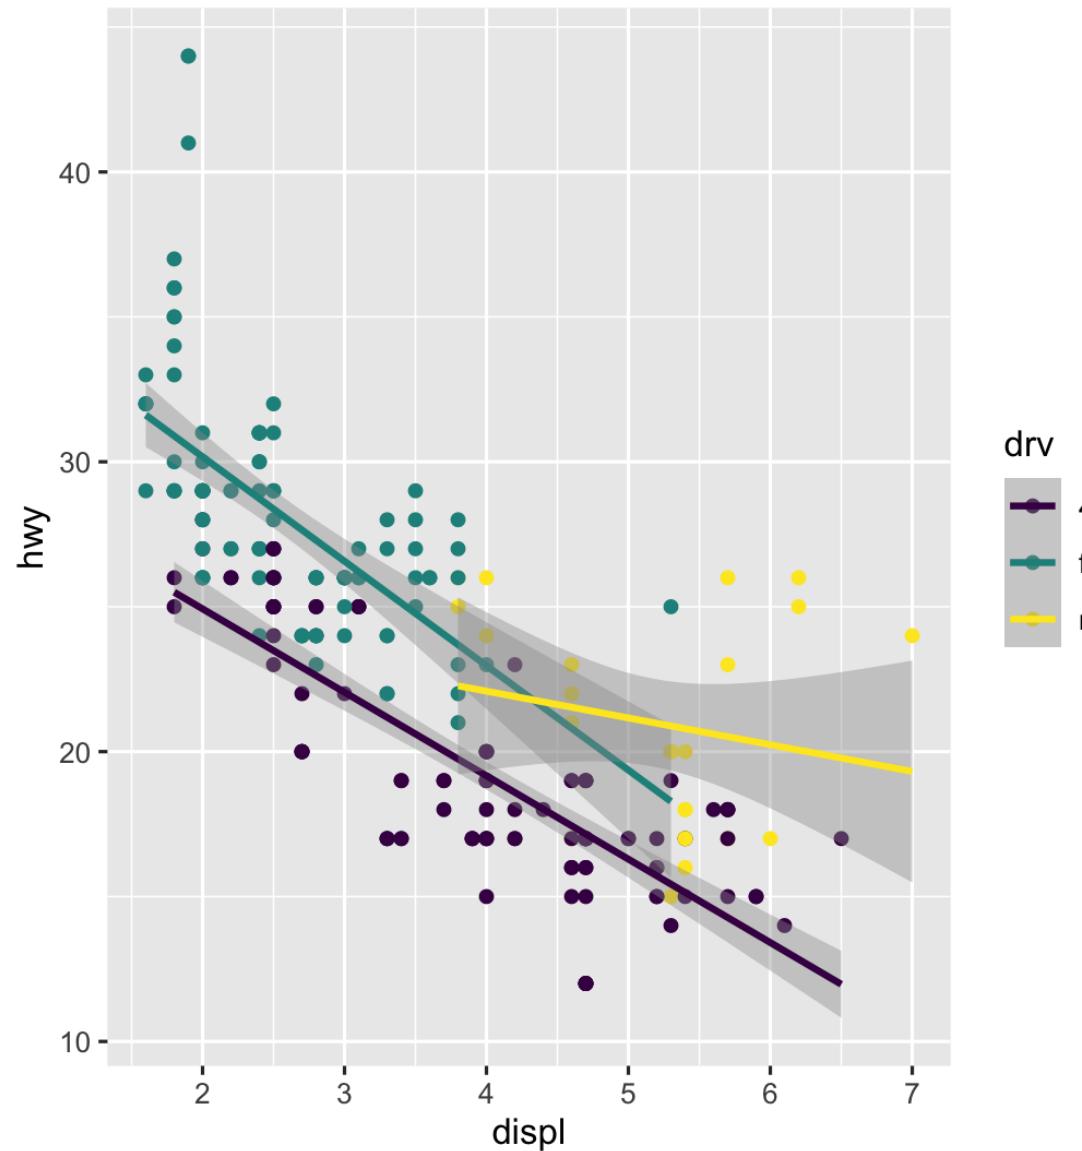

# Make it straight

```
ggplot(data = mpg,  
       mapping = aes(x = displ,  
                      y = hwy,  
                      color = drv)) +  
  geom_point() +  
  geom_smooth(method = "lm")
```

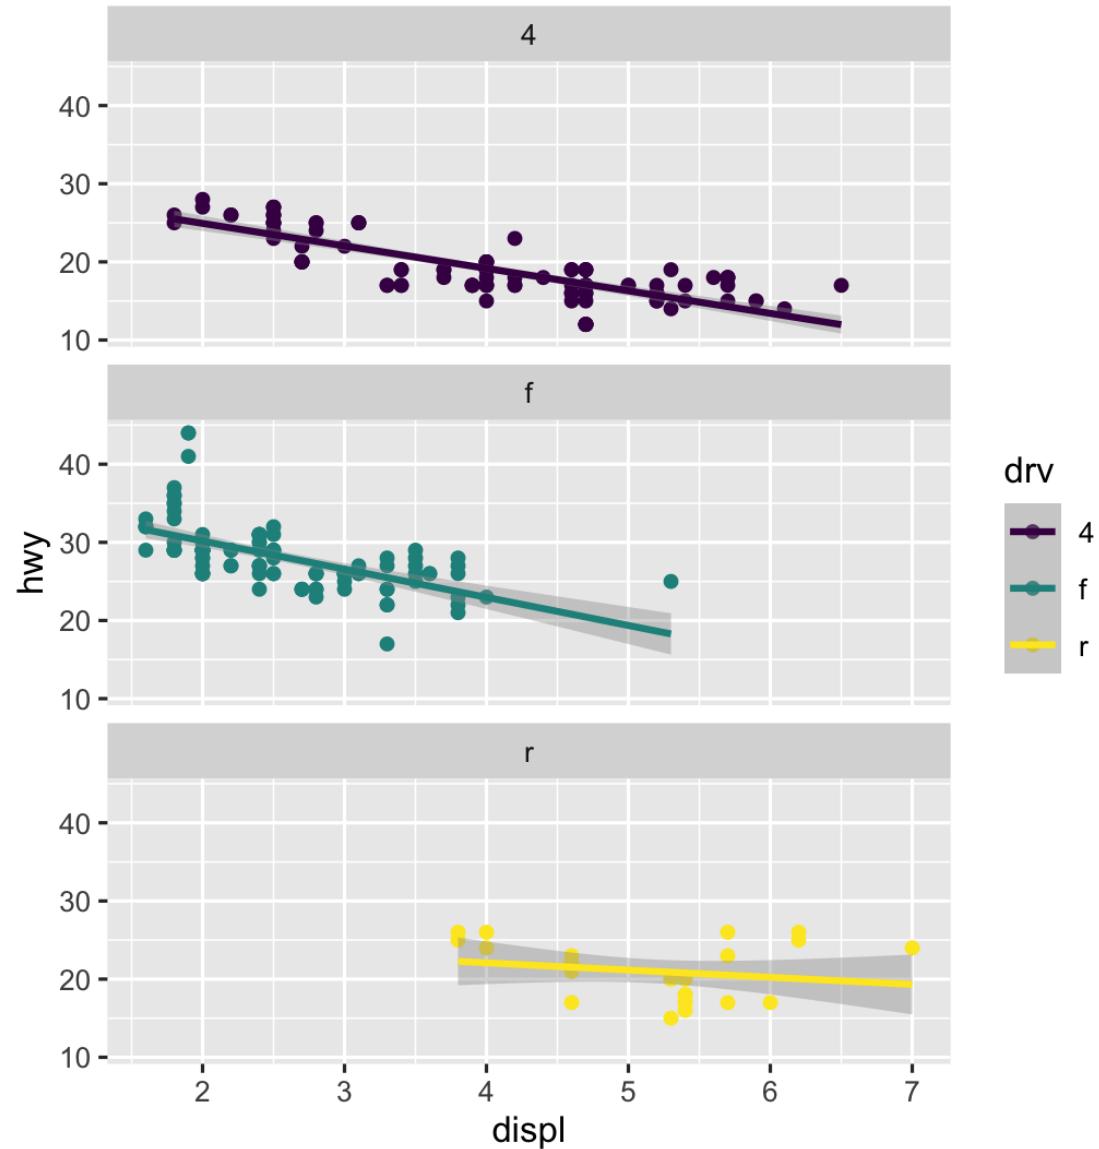

# Use a viridis color scale

```
ggplot(data = mpg,  
       mapping = aes(x = displ,  
                      y = hwy,  
                      color = drv)) +  
  
  geom_point() +  
  geom_smooth(method = "lm") +  
  scale_color_viridis_d()
```

# Facet by drive

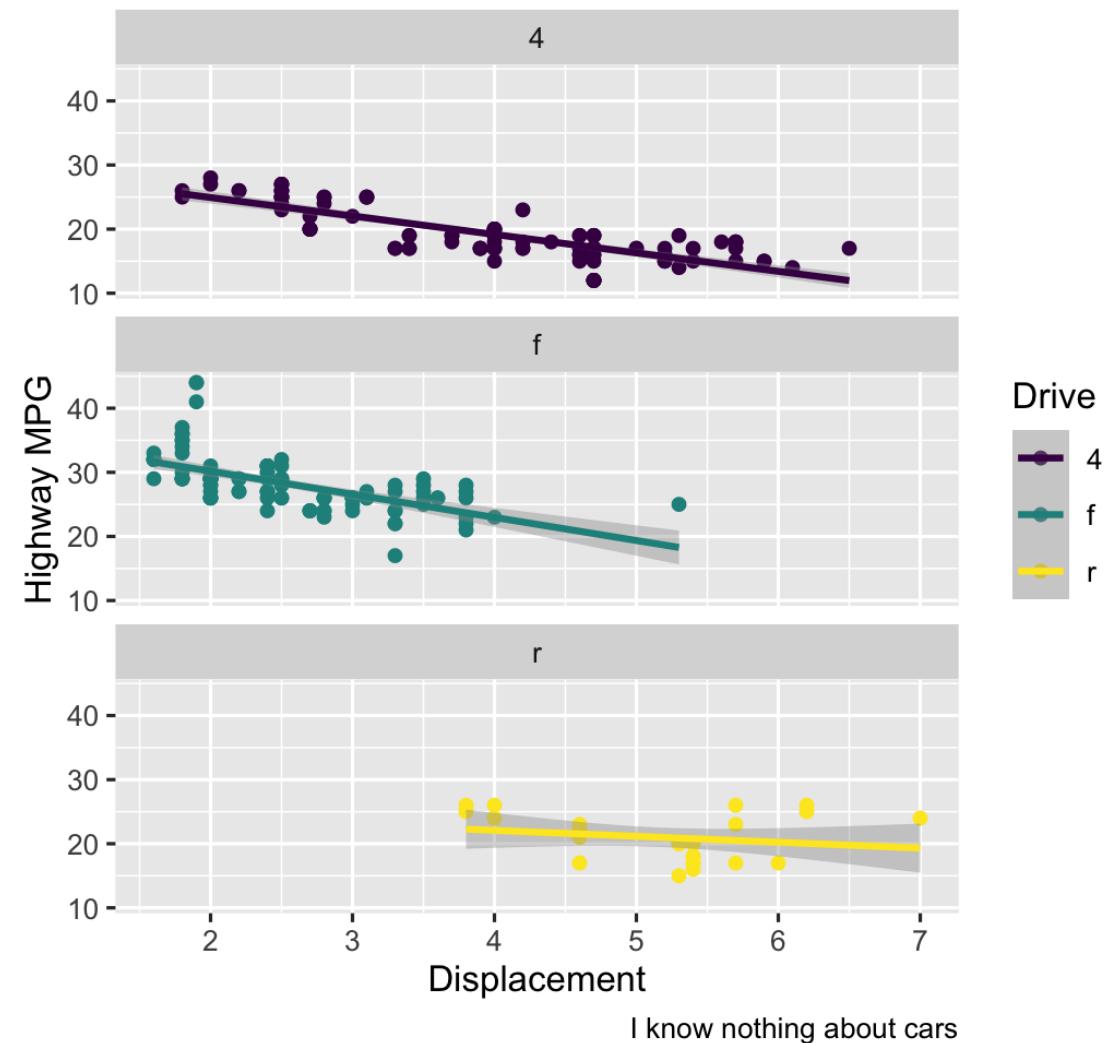

```
ggplot(data = mpg,  
       mapping = aes(x = displ,  
                      y = hwy,  
                      color = drv)) +  
  
  geom_point() +  
  geom_smooth(method = "lm") +  
  scale_color_viridis_d() +  
  facet_wrap(vars(drv), ncol = 1)
```

# Add labels

```
ggplot(data = mpg,  
       mapping = aes(x = displ,  
                      y = hwy,  
                      color = drv)) +  
  
  geom_point() +  
  geom_smooth(method = "lm") +  
  scale_color_viridis_d() +  
  facet_wrap(vars(drv), ncol = 1) +  
  labs(x = "Displacement", y = "Highway MPG"  
       color = "Drive",  
       title = "Heavier cars get lower mileage",  
       subtitle = "Displacement indicates weight (?)",  
       caption = "I know nothing about cars")
```

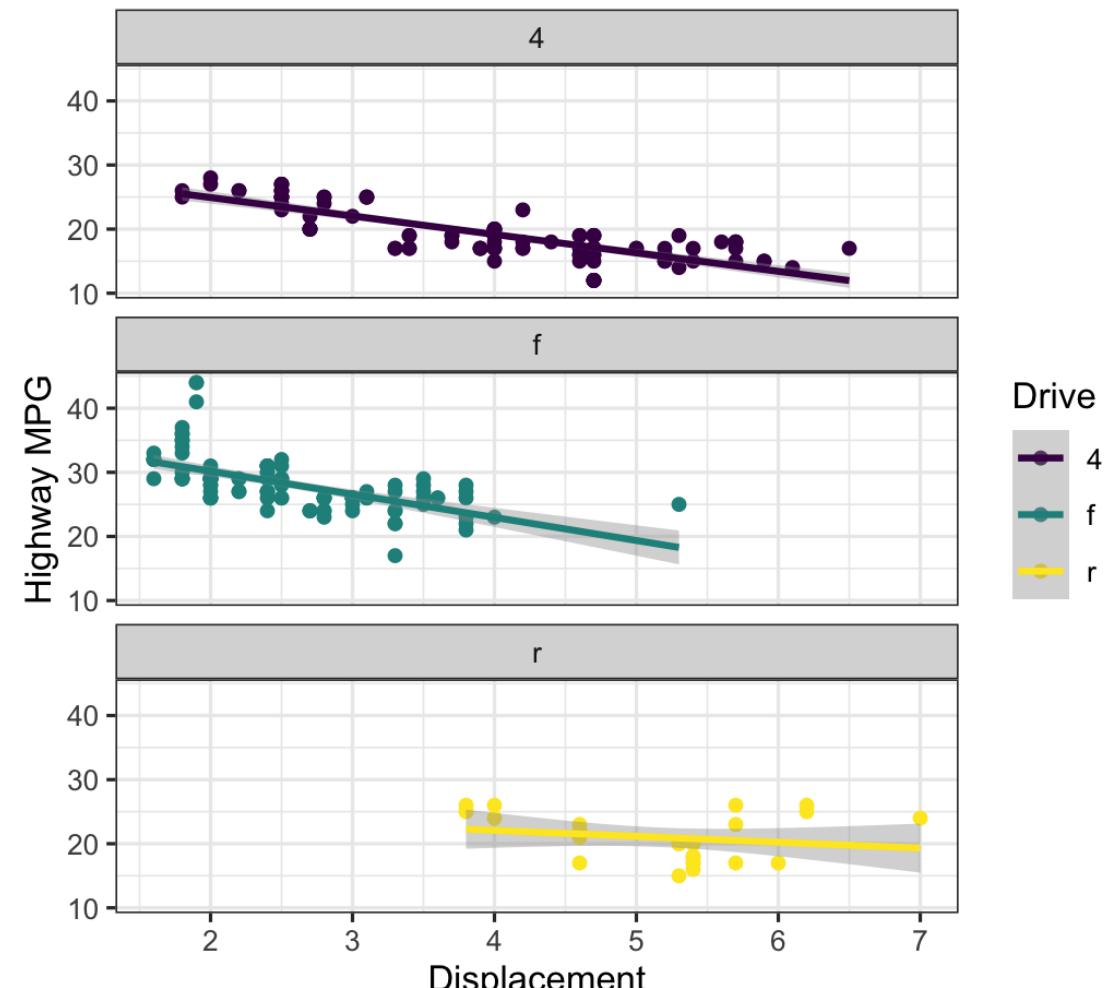

Heavier cars get lower mileage  
Displacement indicates weight(?)

# Add a theme

```
ggplot(data = mpg,  
       mapping = aes(x = displ,  
                      y = hwy,  
                      color = drv)) +  
  
  geom_point() +  
  geom_smooth(method = "lm") +  
  scale_color_viridis_d() +  
  facet_wrap(vars(drv), ncol = 1) +  
  labs(x = "Displacement", y = "Highway MPG"  
       color = "Drive",  
       title = "Heavier cars get lower mileage",  
       subtitle = "Displacement indicates weight (?)",  
       caption = "I know nothing about cars")  
  theme_bw()
```

Heavier cars get lower mileage  
Displacement indicates weight(?)

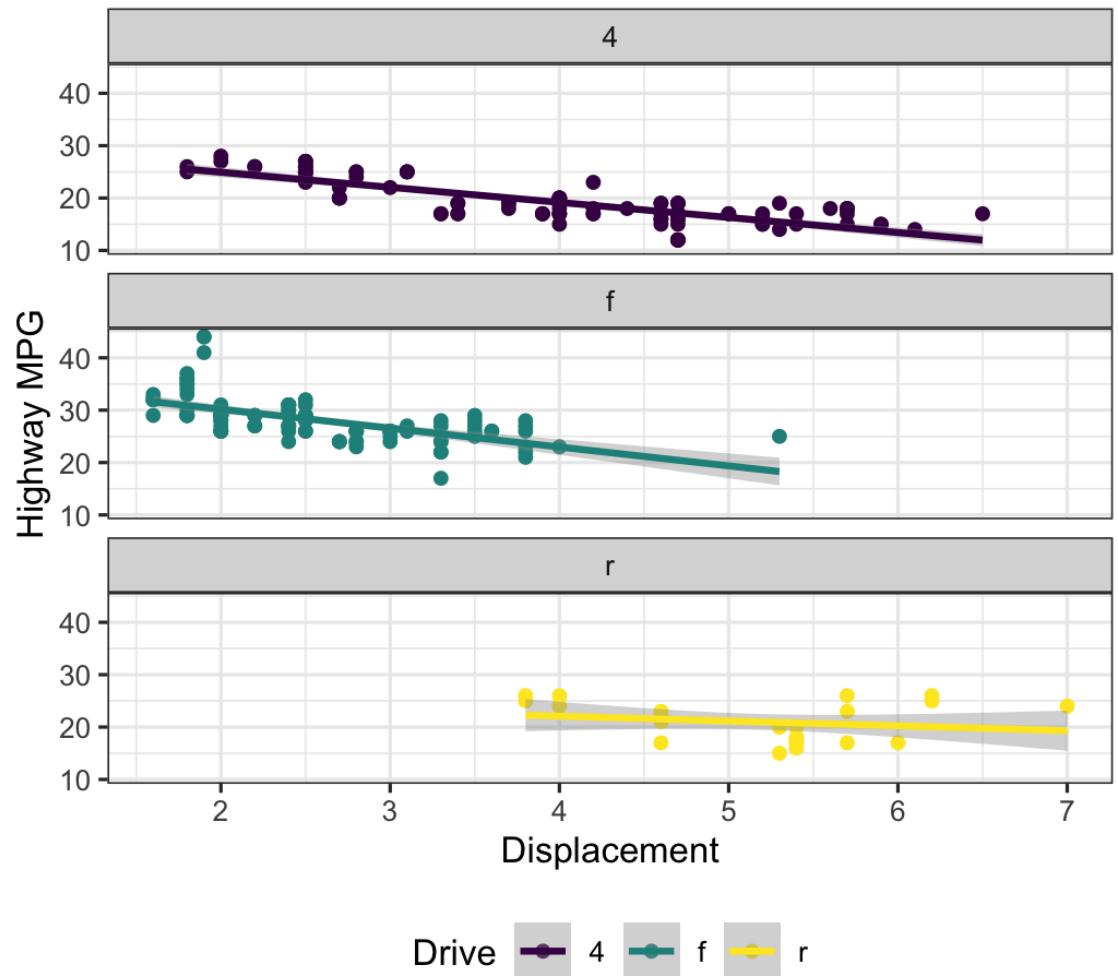

I know nothing about cars

# Modify the theme

```
ggplot(data = mpg,  
       mapping = aes(x = displ,  
                      y = hwy,  
                      color = drv)) +  
  
  geom_point() +  
  geom_smooth(method = "lm") +  
  scale_color_viridis_d() +  
  facet_wrap(vars(drv), ncol = 1) +  
  labs(x = "Displacement", y = "Highway MPG"  
       color = "Drive",  
       title = "Heavier cars get lower mileage",  
       subtitle = "Displacement indicates weight (?)",  
       caption = "I know nothing about cars")  
  theme_bw() +  
  theme(legend.position = "bottom",  
        plot.title = element_text(face = "bold"))
```

## Heavier cars get lower mileage

Displacement indicates weight(?)

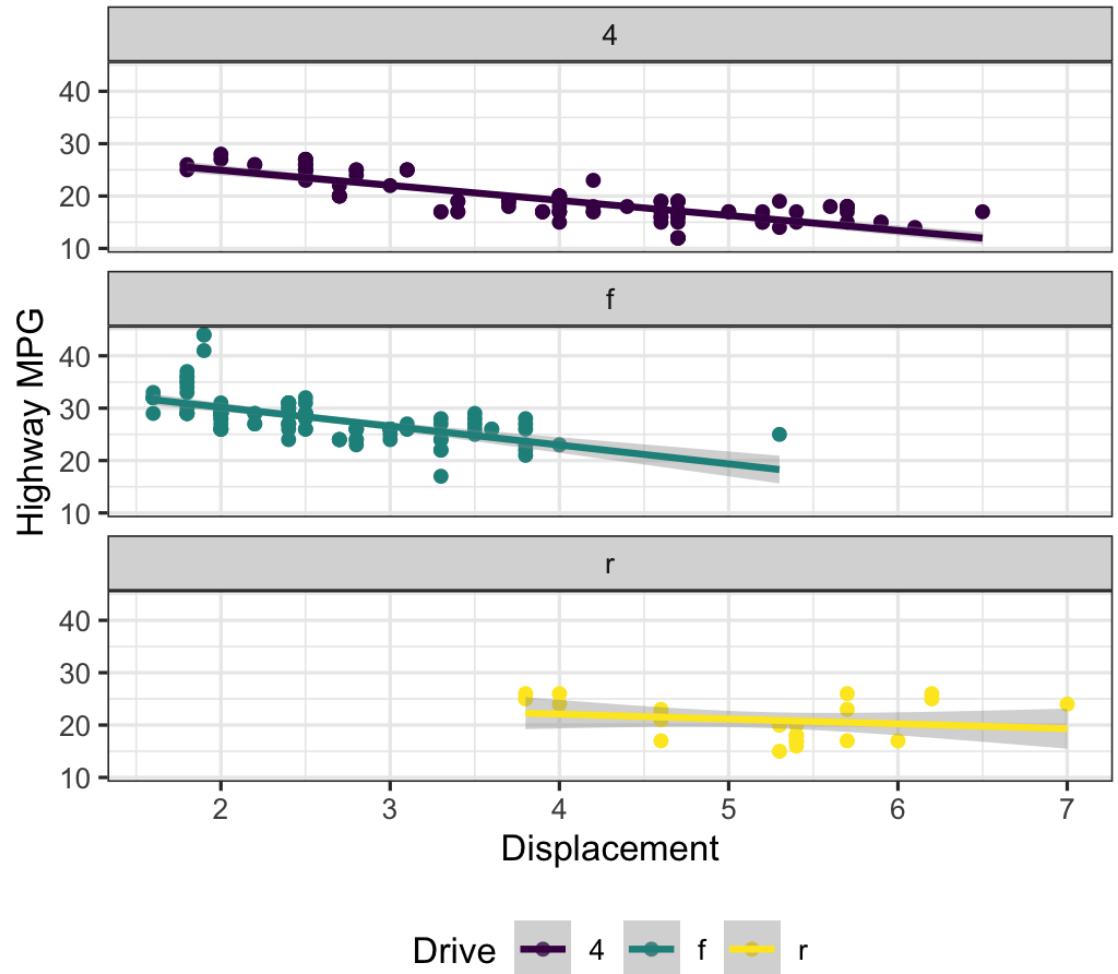

I know nothing about cars

# Finished!

```
ggplot(data = mpg,  
       mapping = aes(x = displ,  
                      y = hwy,  
                      color = drv)) +  
  
  geom_point() +  
  geom_smooth(method = "lm") +  
  scale_color_viridis_d() +  
  facet_wrap(vars(drv), ncol = 1) +  
  labs(x = "Displacement", y = "Highway MPG"  
       color = "Drive",  
       title = "Heavier cars get lower mileage",  
       subtitle = "Displacement indicates weight (?)",  
       caption = "I know nothing about cars")  
  theme_bw() +  
  theme(legend.position = "bottom",  
        plot.title = element_text(face = "bold"))
```

## Heavier cars get lower mileage

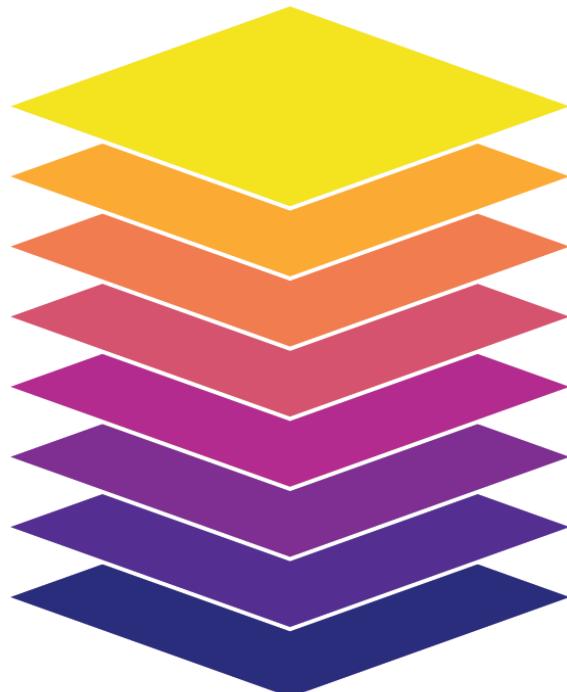

Displacement indicates weight(?)

I know nothing about cars

# So many possibilities!

Theme  
Labels  
Coordinates  
Facets  
Scales  
Geometries  
Aesthetics  
Data

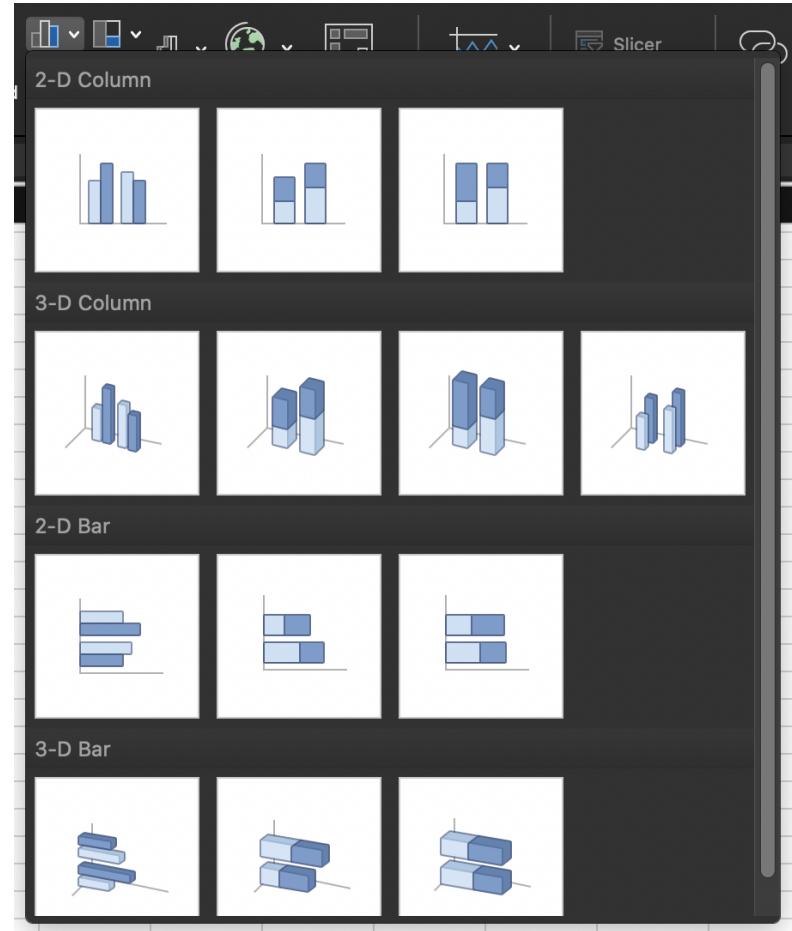

These were just a few examples of layers!

See [the ggplot2 documentation](#) for complete examples of everything you can do

# A true grammar

**With the grammar of graphics,  
we don't talk about specific  
chart types**

**Hunt through Excel menus for a  
stacked bar chart and manually  
reshape your data to work with it**

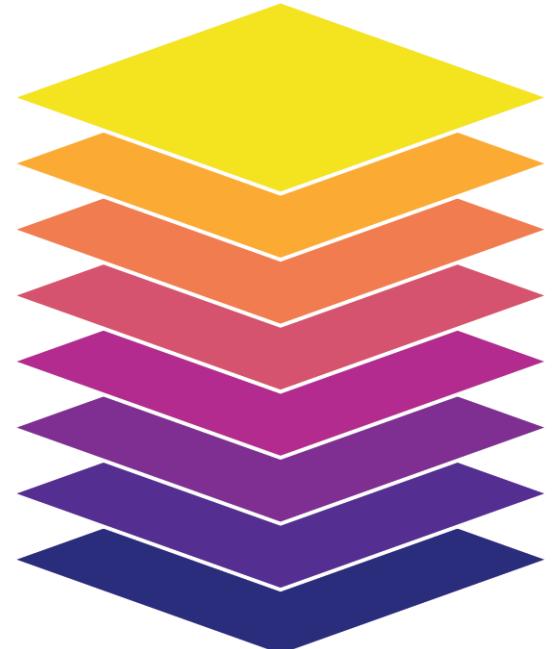

# A true grammar

With the grammar of graphics,  
we *do* talk about specific  
chart *elements*

Map a column to the x-axis, fill by a  
different variable, and `geom_col()` to  
get stacked bars

Geoms can be interchangeable  
(e.g. switch `geom_violin()` to  
`geom_boxplot()`)

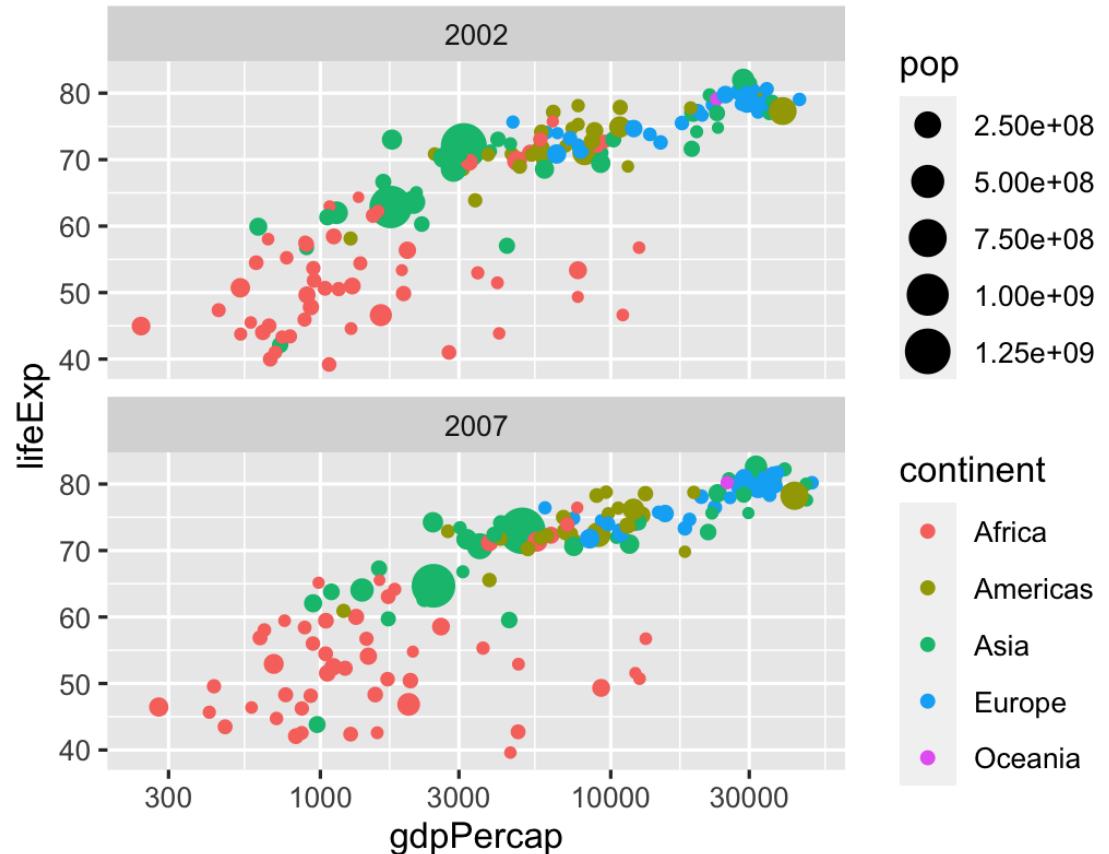

Theme

Data

# Describing graphs with the grammar

Map wealth to the x-axis, health to the y-axis, add points, color by continent, size by population, scale the y-axis with a log, and facet by year

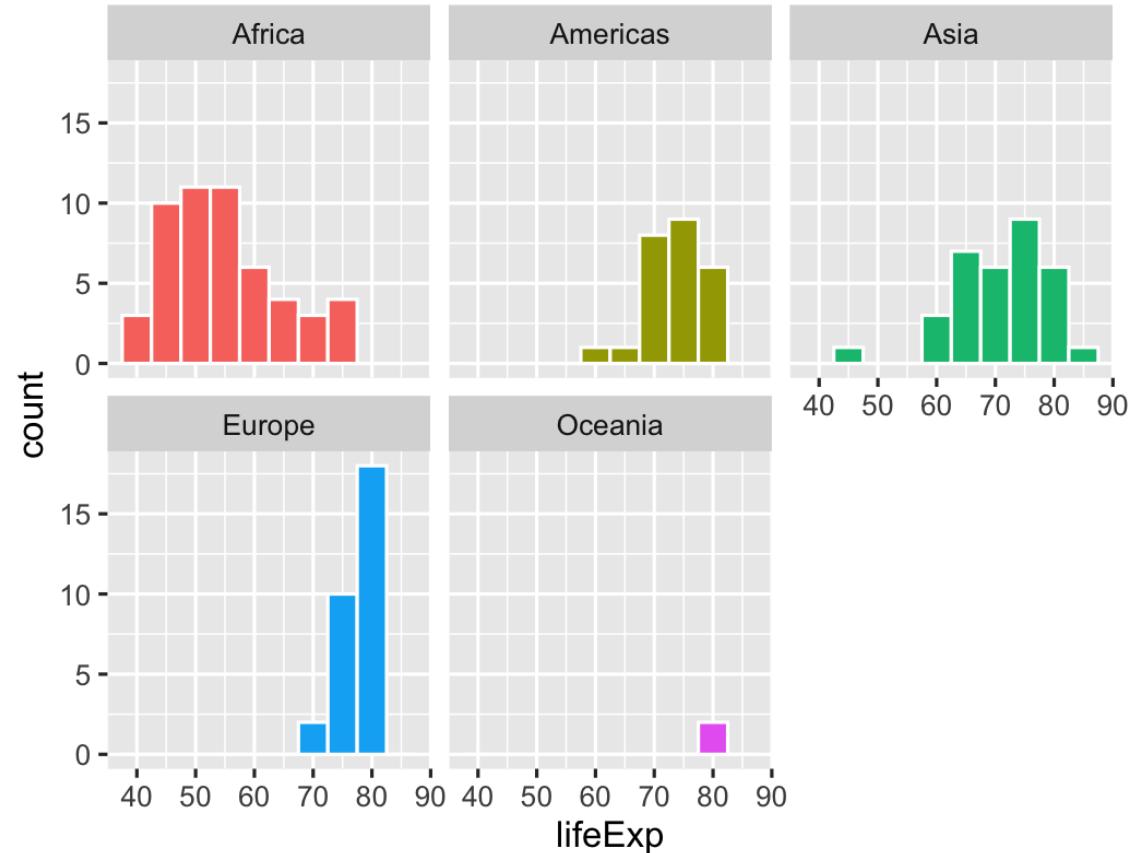

```
ggplot(filter(gapminder,
              year %in% c(2002, 2007)),
       aes(x = gdpPercap,
           y = lifeExp,
           color = continent,
           size = pop)) +
  geom_point() +
  scale_x_log10() +
  facet_wrap(vars(year), ncol = 1)
```

# Describing graphs with the grammar

Map health to the x-axis, add a histogram with bins for every 5 years, fill and facet by continent

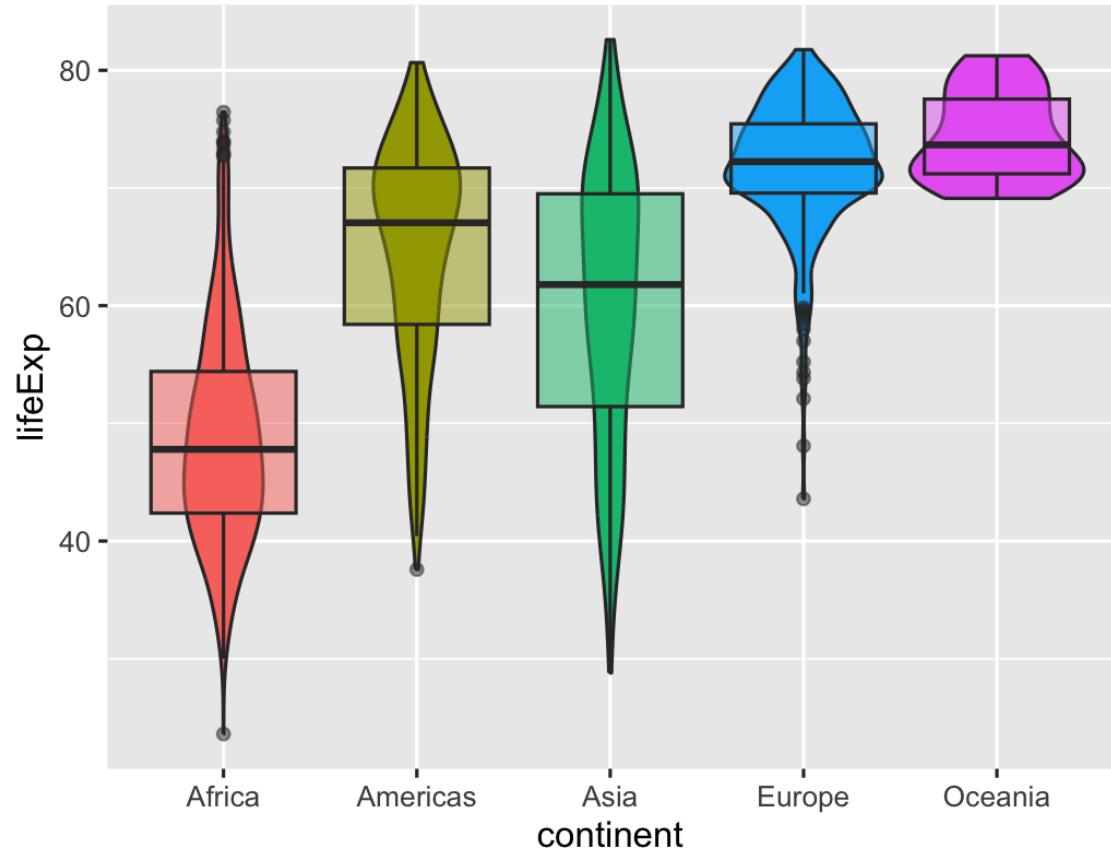

```
ggplot(gapminder_2007,  
       aes(x = lifeExp,  
            fill = continent)) +  
  geom_histogram(binwidth = 5,  
                 color = "white") +  
  guides(fill = FALSE) + # Turn off legend  
  facet_wrap(vars(continent))
```

# Describing graphs with the grammar

Map continent to the x-axis, health to the y-axis, add violin plots and semi-transparent boxplots, fill by continent

```
ggplot(gapminder,  
       aes(x = continent,  
            y = lifeExp,  
            fill = continent)) +  
  geom_violin() +  
  geom_boxplot(alpha = 0.5) +  
  guides(fill = FALSE) # Turn off legend
```

# Scales

**Scales change the properties of the variable mapping**

## Example layer

`scale_x_continuous()`

## What it does

Make the x-axis continuous

`scale_x_continuous(breaks = 1:5)`

Manually specify axis ticks

`scale_x_log10()`

Log the x-axis

`scale_color_gradient()`

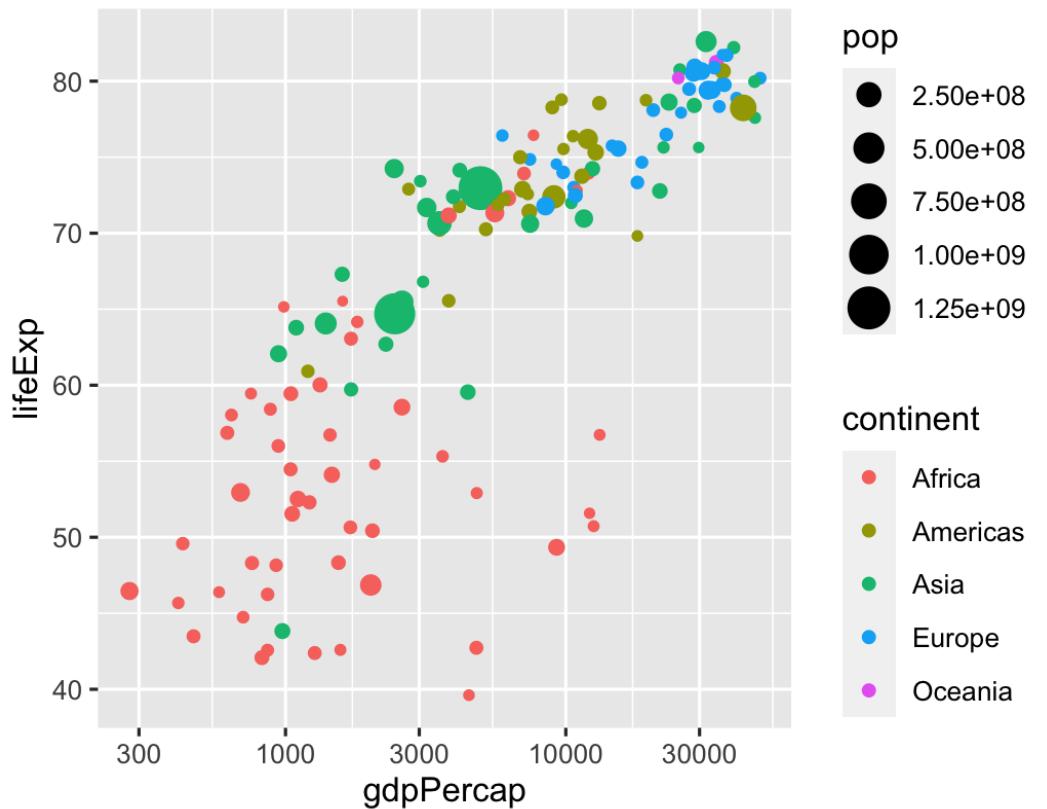

Use a gradient

`scale_fill_viridis_d()`

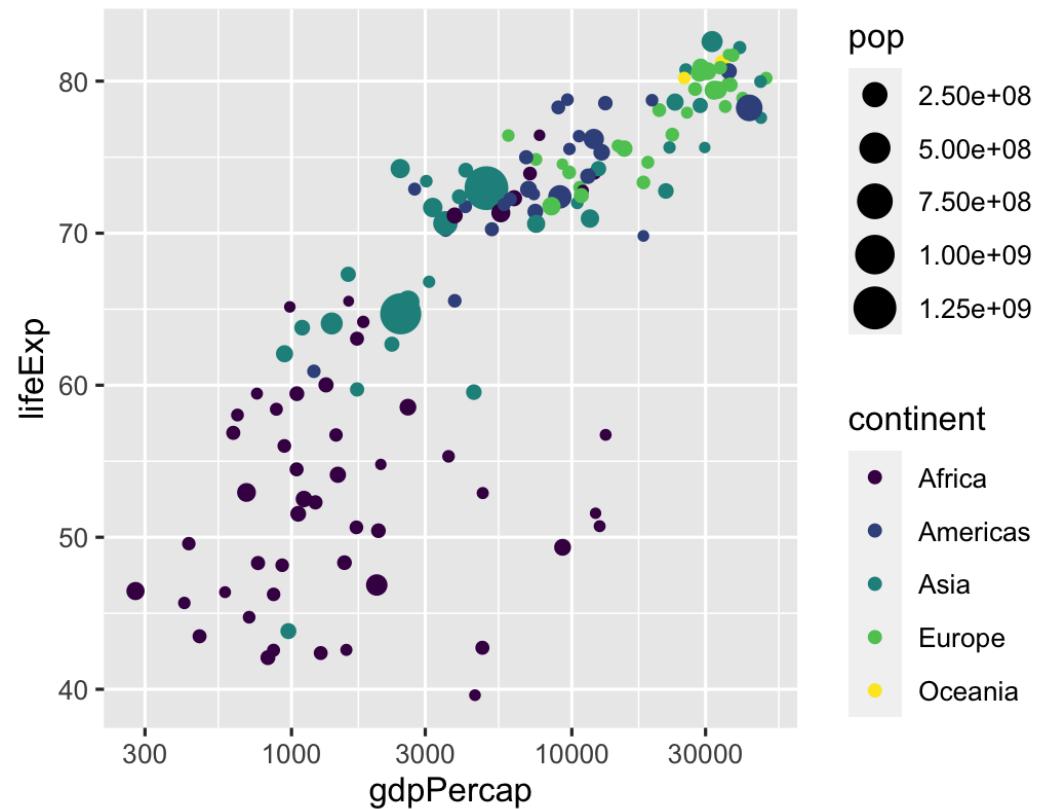

Fill with discrete viridis colors

# Scales

`scale_x_log10()`

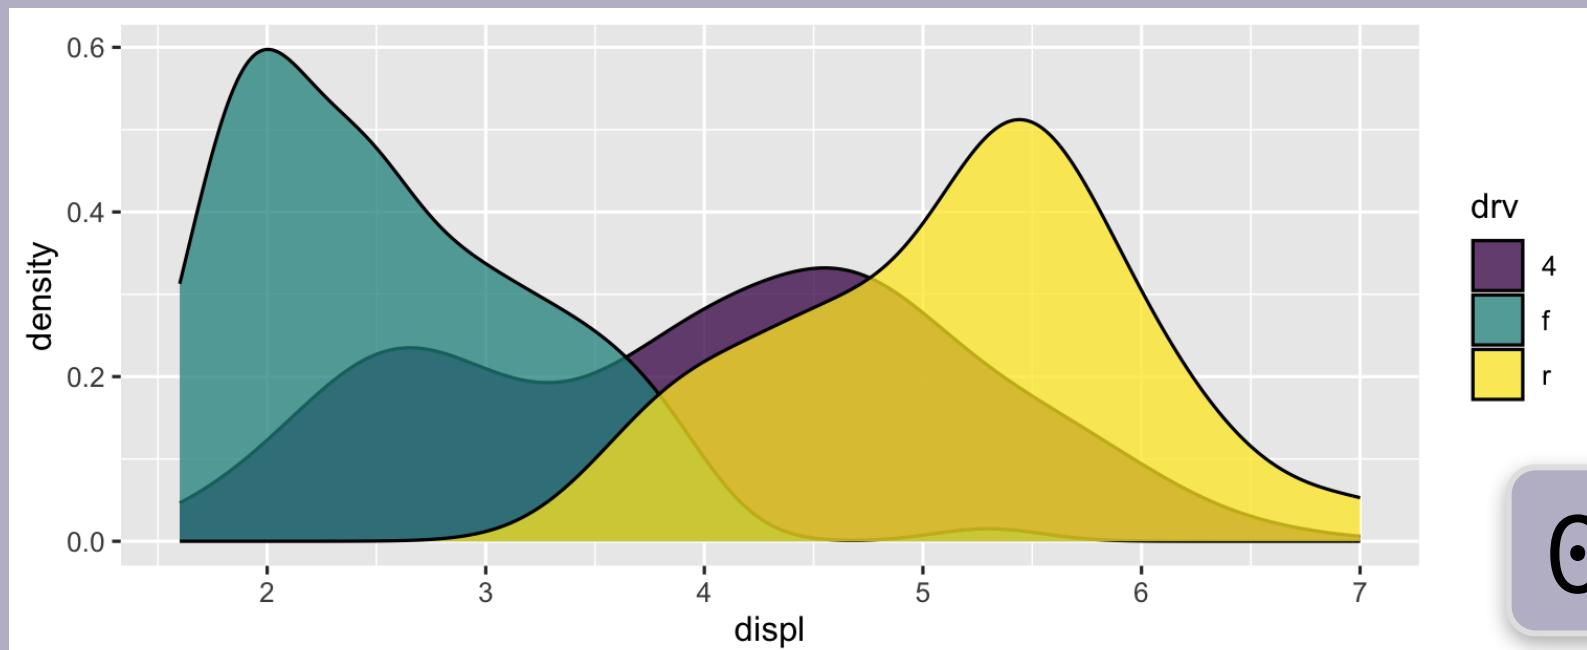

`scale_color_viridis_d()`

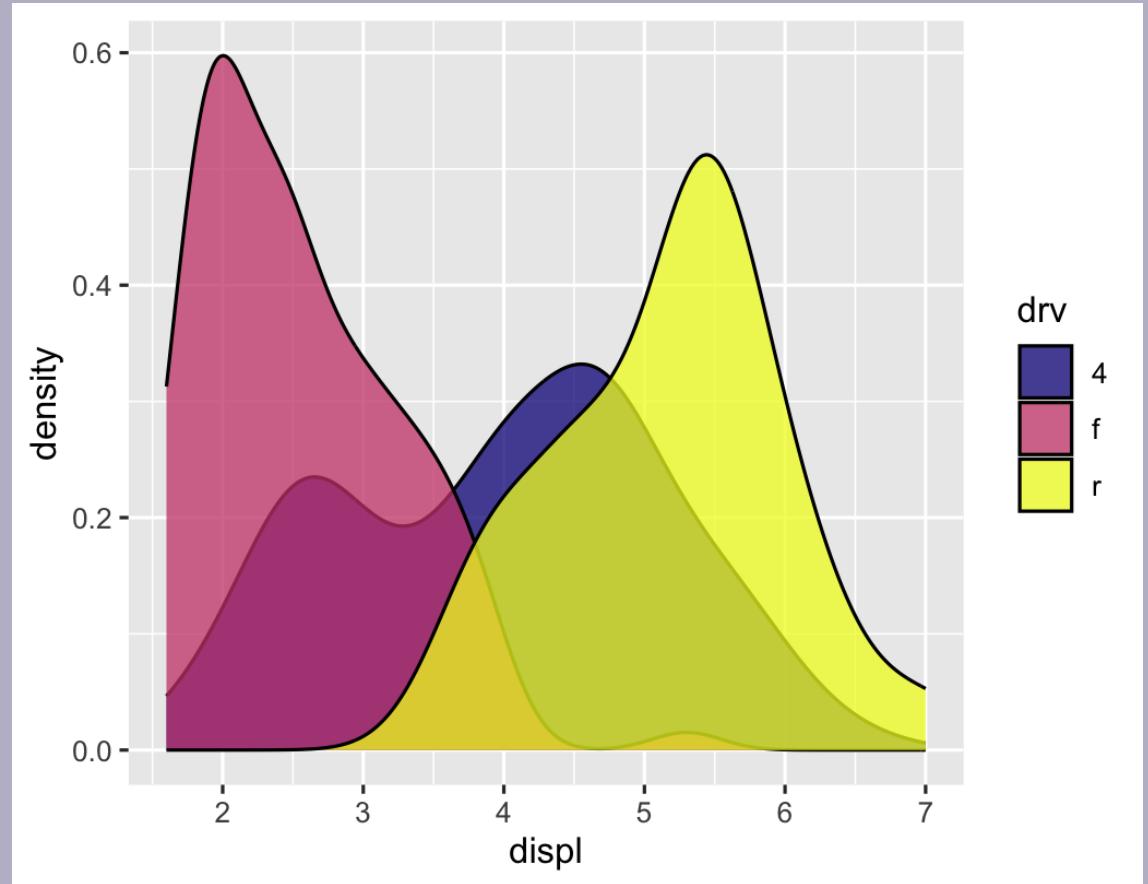

# Your turn #7

Make this density plot of `displ` filled by `drv`.  
Use the `viridis` fill scale.

For bonus fun, try a different `viridis` option like `plasma` OR `inferno`.

```
ggplot(mpg,  
       aes(x = displ,  
            fill = drv)) +  
  geom_density(alpha = 0.75) +  
  scale_fill_viridis_d(option = "plasma")
```

# Facets

**Facets show subplots for different subsets of data**

## Example layer

```
facet_wrap(vars(continent))
```

```
facet_wrap(vars(continent, year))
```

```
facet_wrap(..., ncol = 1)
```

```
facet_wrap(..., nrow = 1)
```

## What it does

Plot for each continent

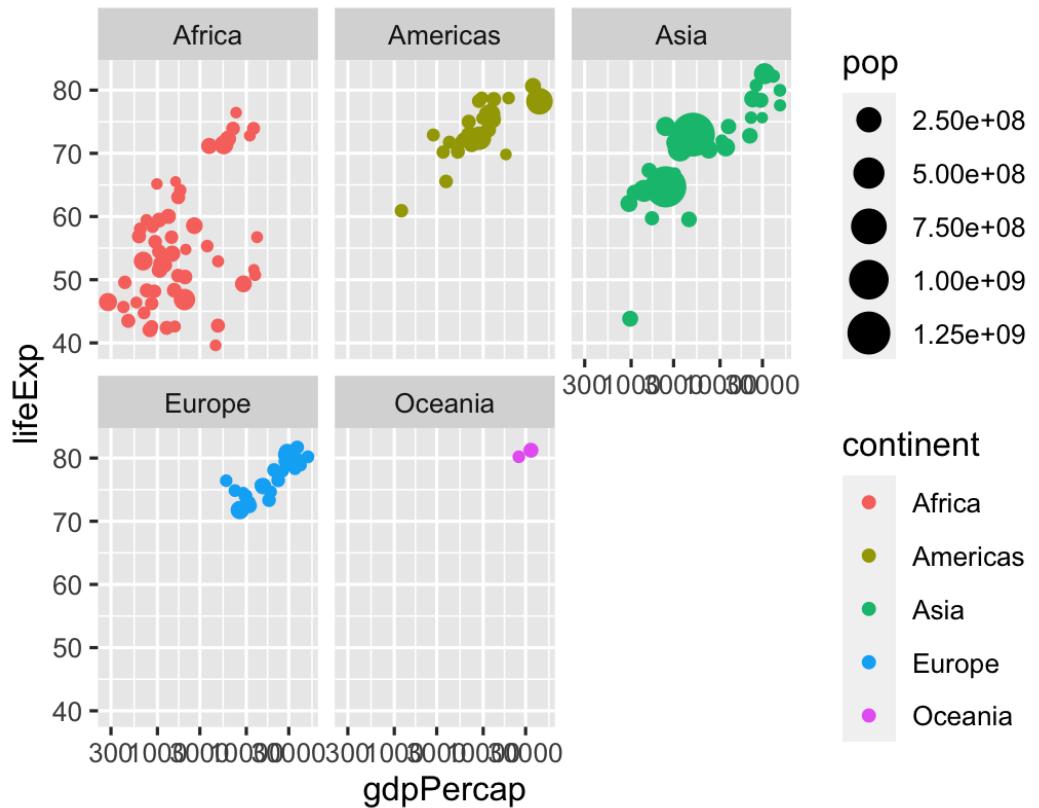

Plot for each continent/year

Put all facets in one column

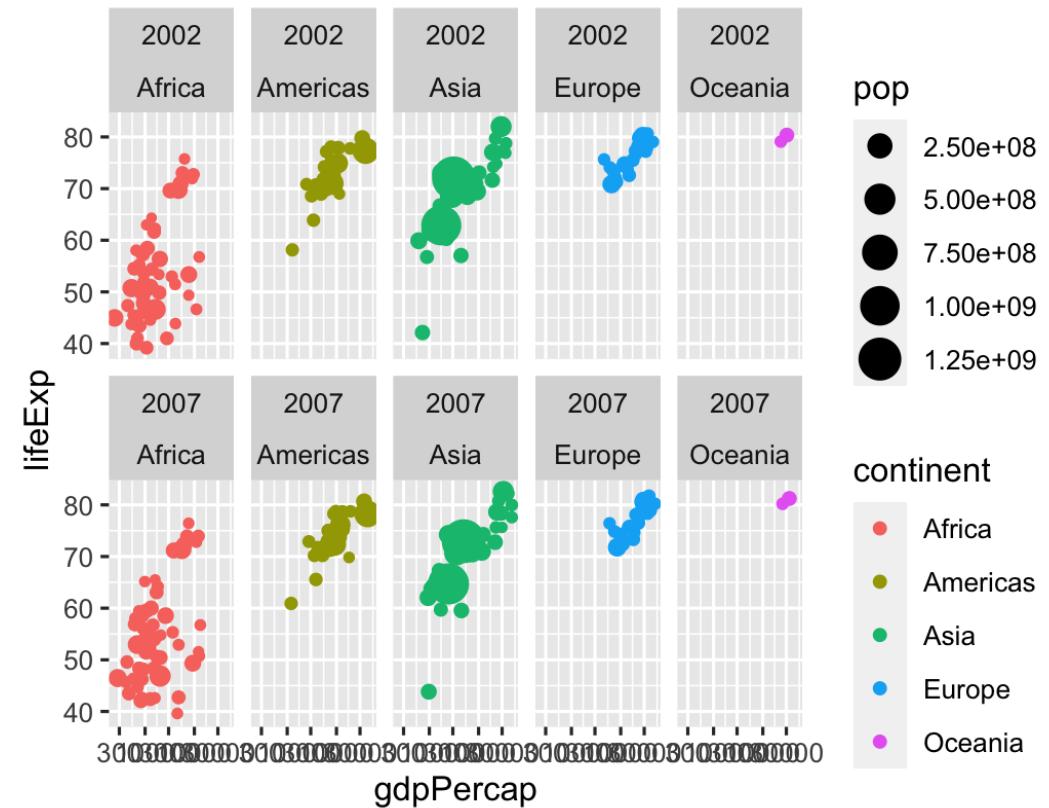

Put all facets in one row

# Facets

`facet_wrap(vars(continent))`

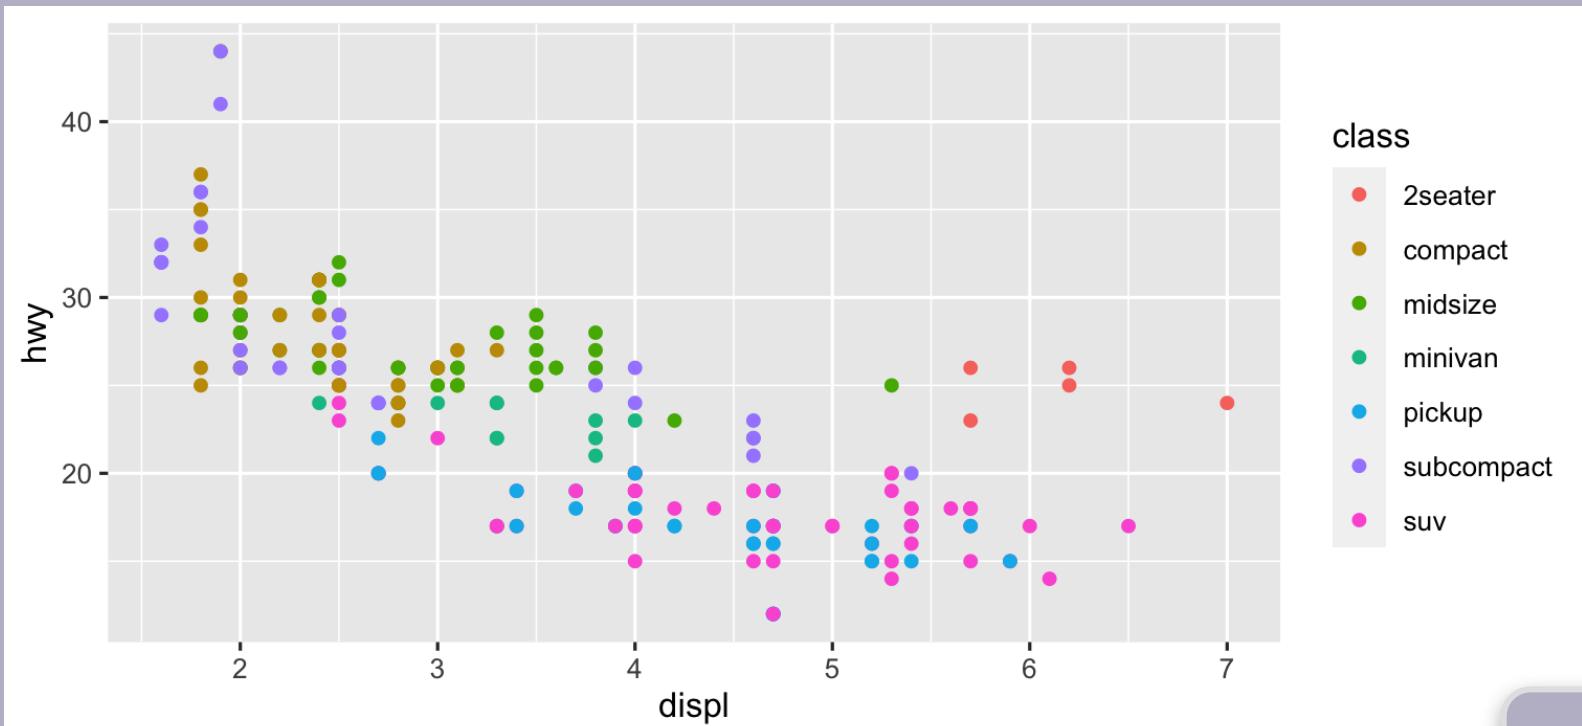

`facet_wrap(vars(continent, year))`

# Your turn #8

Facet this scatterplot by drv. Are there any interesting trends?

03 : 00

```
ggplot(mpg,  
       aes(x = displ,  
            y = hwy,  
            color = class)) +  
  geom_point() +  
  facet_wrap(vars(drv))
```

# Coordinates

## Change the coordinate system

### Example layer

```
coord_cartesian()
```

```
coord_cartesian(ylim = c(1,  
10))
```

```
coord_flip()
```

```
coord_polar()
```

### What it does

Standard x-y coordinate system

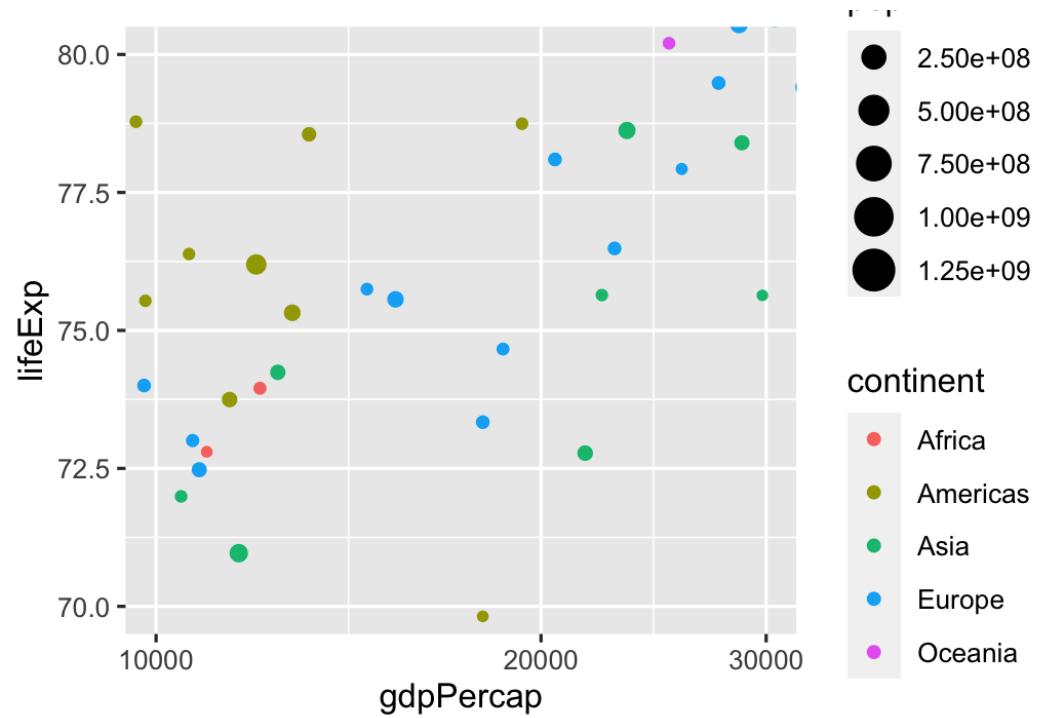

Zoom in where y is 1-10

Switch x and y

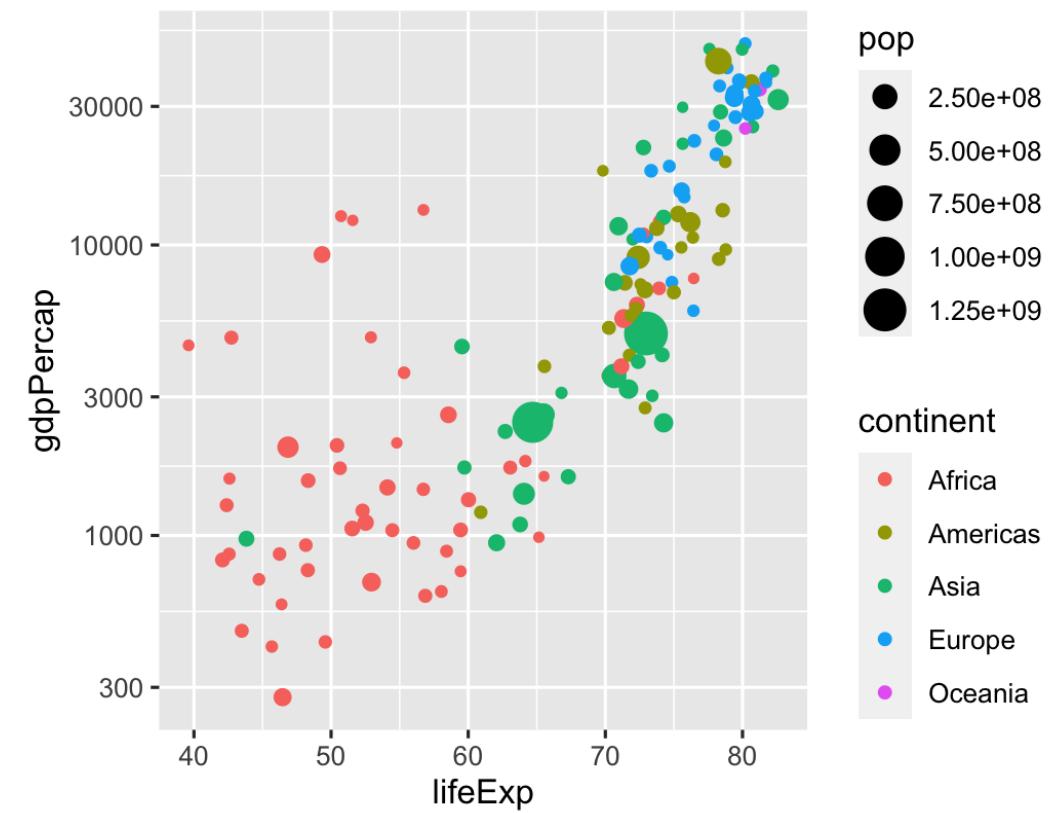

Use circular polar system

# Coordinates

```
coord_cartesian(ylim = c(70, 80),  
                 xlim = c(10000, 30000))
```

```
coord_flip()
```

# Labels

Add labels to the plot with a single `labs()` layer

## Example layer

```
labs(title = "Neat title")
```

## What it does

Title

```
labs(caption = "Something")
```

Caption

```
labs(y = "Something")
```

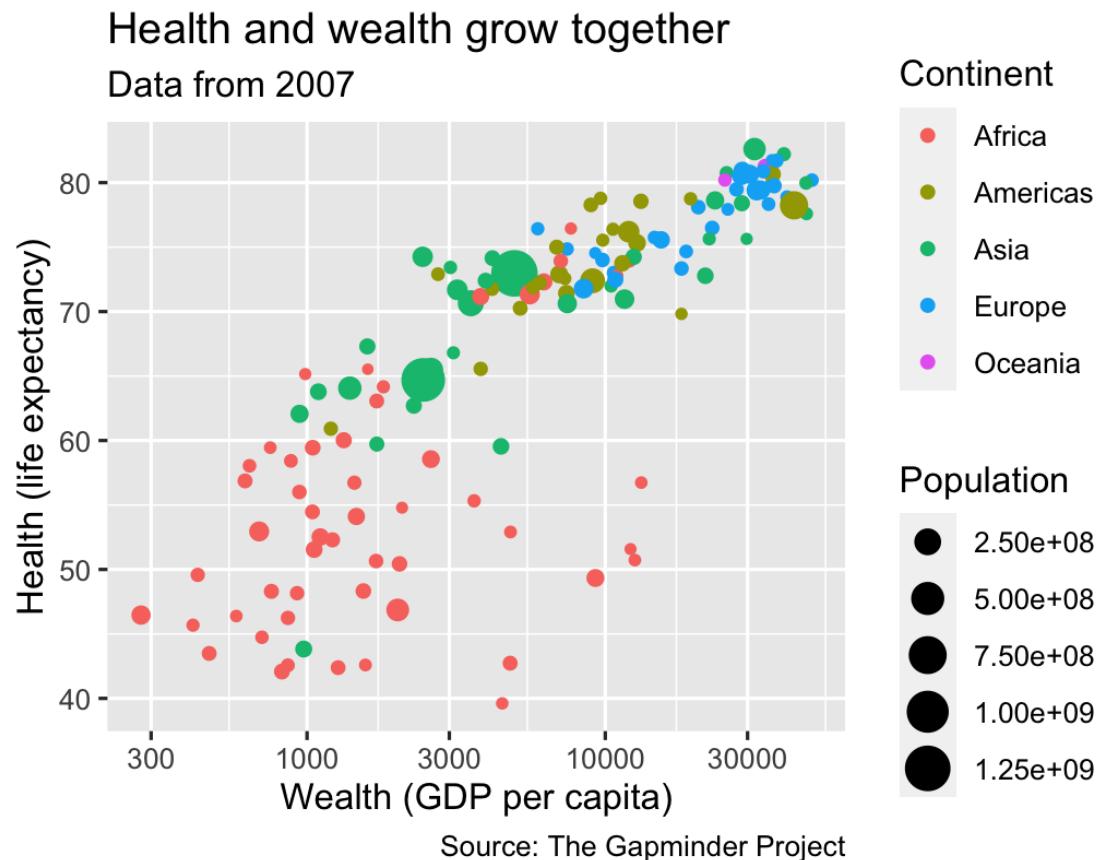

y-axis

```
labs(size = "Population")
```

Title of size legend

# Labels

```
ggplot(gapminder_2007,  
       aes(x = gdpPerCap, y = lifeExp,  
            color = continent, size = pop)) +  
  geom_point() +  
  scale_x_log10() +  
  labs(title = "Health and wealth grow together",  
       subtitle = "Data from 2007",  
       x = "Wealth (GDP per capita)",  
       y = "Health (life expectancy)",  
       color = "Continent",  
       size = "Population",  
       caption = "Source: The Gapminder Project")
```

# Theme

Change the appearance of anything in the plot

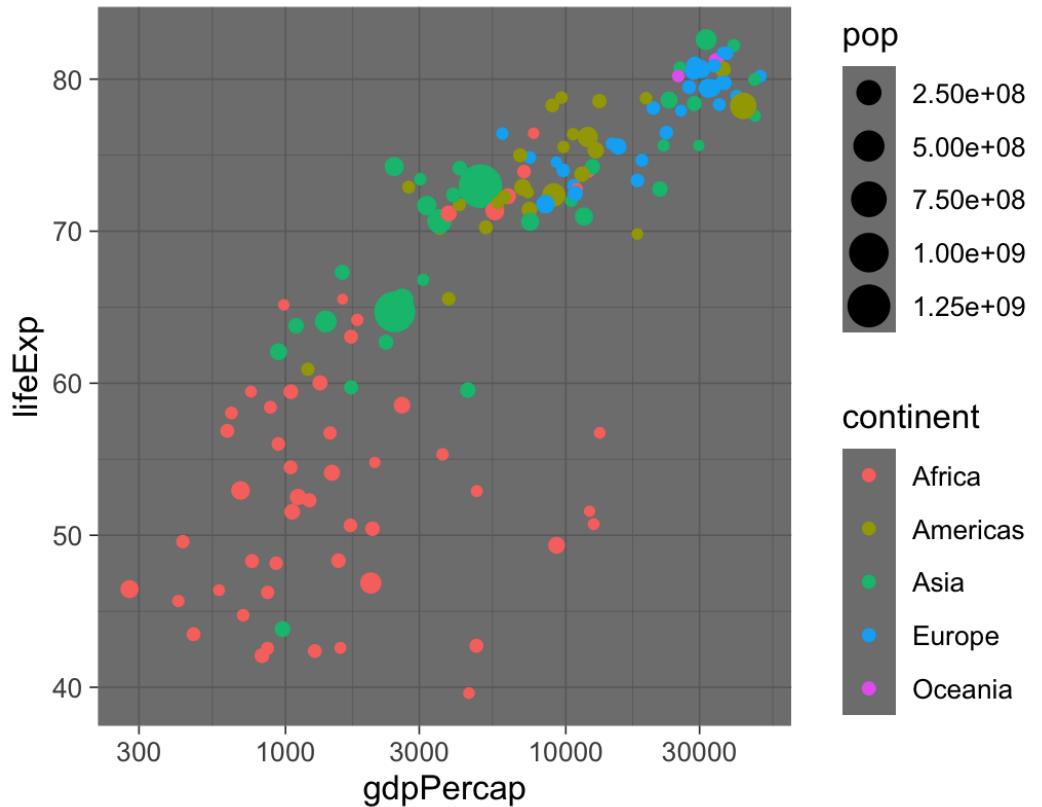

There are many built-in themes

---

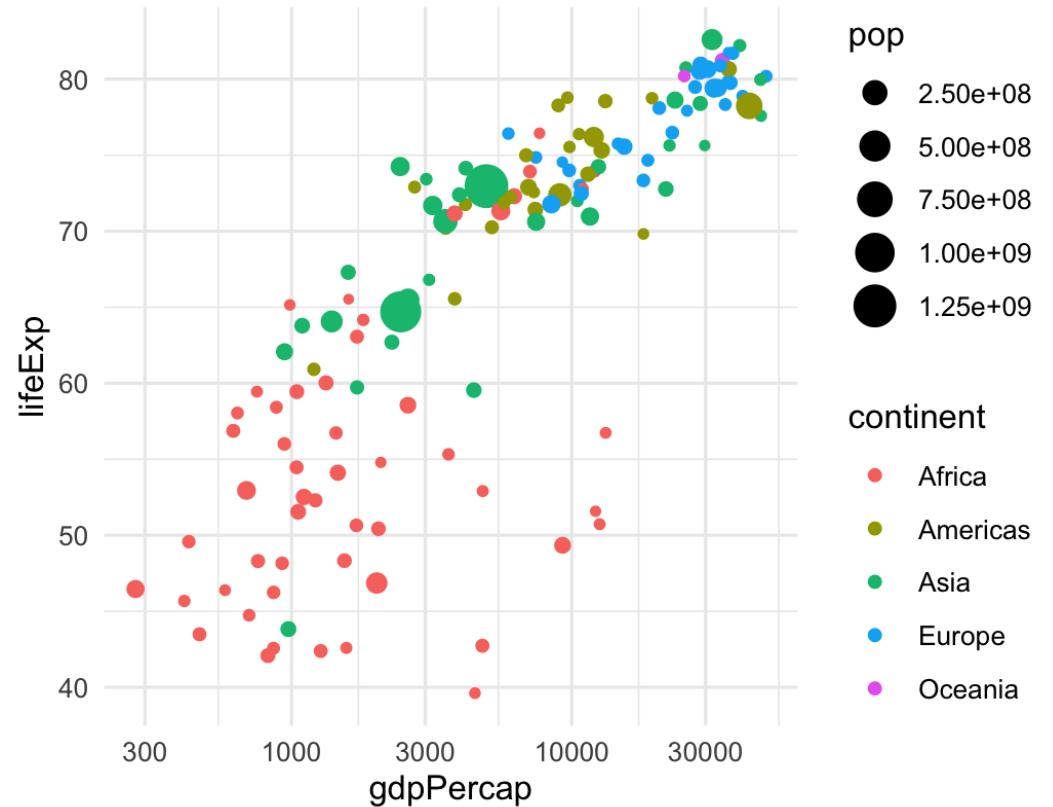

<b>Example layer</b>	<b>What it does</b>
theme_grey()	Default grey background
theme_bw()	Black and white
theme_dark()	Dark
theme_minimal()	Minimal

# Theme

`theme_dark()`

`theme_minimal()`

# Theme

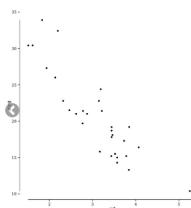

There are collections of pre-built themes online,  
like the **ggthemes** package

## ggthemes

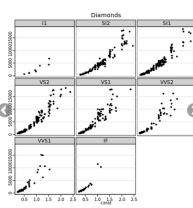

theme\_wsj

Wall Street Journal theme

theme\_tufte

Tufte Maximal Data, Minimal Ink Theme

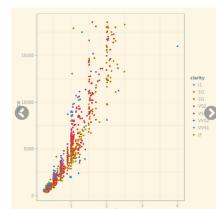

theme\_stata

Themes based on Stata graph schemes

theme\_solid

Theme with nothing other than a background color

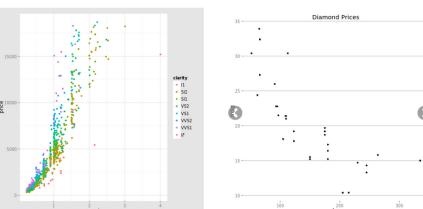

theme\_solarized

ggplot color themes based on the Solarized palette

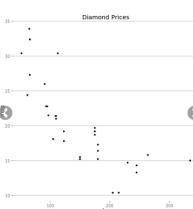

theme\_map

Clean theme for maps

theme\_igray

Inverse gray theme

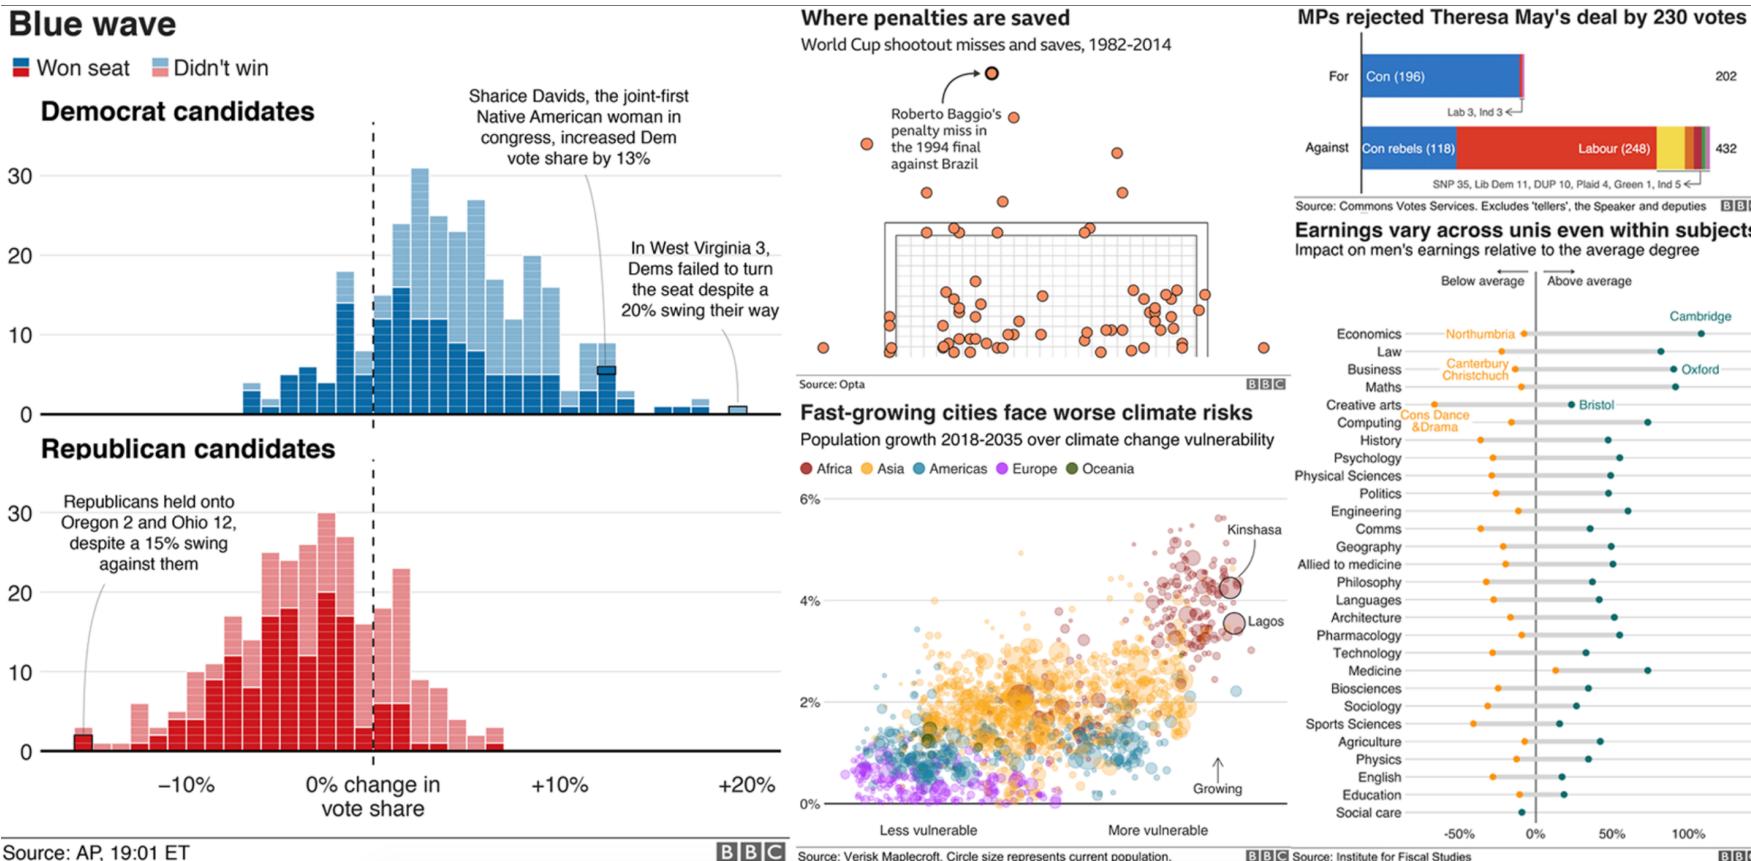

theme\_hc

Highcharts JS theme

# Theme

Organizations often make their own custom themes, like the BBC

# Theme options

Make theme adjustments with `theme()`

There are a billion options here!

```
theme_bw() +  
  theme(legend.position = "bottom",  
        plot.title = element_text(face = "bold"),  
        panel.grid = element_blank(),  
        axis.title.y = element_text(face = "italic"))
```

# Saving graphs

**Use `ggsave()` to save a plot to your computer**

**Store plot as an object, feed it to `ggsave()`**

```
my_plot <- ggplot(...)

ggsave("plot_name.pdf", my_plot, width = 5, height = 3.5)
ggsave("plot_name.png", my_plot, width = 5, height = 3.5)
```

# Next up

Transforming and  
manipulating data with **dplyr**
